CONTENTS

SECTION I
Pedestrian Administration 1

CHAPTER 1 **Introduction to UNIX System Administration** 2

What UNIX System Administration Is 2
Day-to-Day Administration 3
Periodic Maintenance 4
Tasks Performed As Needed 4
Network Administration 4
Where UNIX Is Today 4
Computers Used to Come in Three Sizes 5
Few Computers Will Stand Alone in the 1990s 6
UNIX Standards 7
Where Is UNIX Going? 8
UNIX: A System Administrator's View 10
Manager's Corner 11

CHAPTER 2 **Day-to-Day Administration** 13

The Ongoing Tasks of Day-to-Day Administration 13
Morning Cleanup and Inspection 15
The `root` Disk 15
`/usr` 15
`/usr/spool` and `/var/spool` 15
`/usr/spool/console` 15
`/tmp`, `/var/tmp`, and `/usr/tmp` 16
Miscellaneous File Systems 16
Read `root`'s Mail 16
Check System Daemons 16
In Search of Overgrown Files 17
Network Administration 17
Scripts Do It Better 17
Search-and-Destroy Mission 18
In Search of Errors 19
Users and Disk Space 21

Elective Time or Other Daily Tasks 22
Unscheduled Cleanup Areas 22
Console Log 23
`sendmail` 24
Making `lost+found` 24
CPU Hogs 27
Administration That Comes to You 28
Performance Watch 28
User Administration 29
Password and User-ID Control 30
Identity Files 30
`moduser` 30
Manager's Corner 31

CHAPTER 3 **Commands** 33

Creative Uses of Common Commands 33
`ps` 34
`grep` 35
Read-Only Editor 36
`ed` 37
`fsck` 38
The `-n` Flag 38
The `-y` Flag 38
`df` 39
`od` 39
`rm` Command Humility Lessons 40
`find` 43
Regular Expressions 44
The not Character 45
Tricky `egrep` 45
To `sed` or Not to `sed` 46
Advanced Administration Commands 48
Memory Formatters 48
`uerf`: An Error Formatter 49
`fuser` (not BSD) 49
`killall`, `halt`, and `haltsys` 49
`link` 50
`/etc/pwck` (System V only) 50
`sadp` 51
`whodo` 51
System V Release 4 Enhanced Administration 52
Manager's Corner 54

CHAPTER 4 **Files 56**

File System Administration 56
fsck Particulars 57
Disk Fragmentation 58
root File Expansion 59
Unmounting Problems 60
File Conventions 61
Device Special System Files 61
Errors and /dev/error 62
/dev/lp* 62
Memory: /dev/mem and /dev/kmem 62
null and /dev/null 62
stx: /dev/stx/??[0-n] 62
Magnetic Tape: /dev/tape and /dev/rmt 63
/dev/tty* 63
Miscellaneous 63
System Files on / 64
unix or ???x 64
/etc Files 65
rc 65
checklist 65
/etc/gettydefs 65
group 66
/etc/inittab 67
motd: The Message of the Day 67
passwd 67
baddu.c: passwd File Manipulation 69
/etc/passwd File Security 71
YP Password Administration 72
Adding Users 72
Changing Passwords on YP 74
utmp and wtmp 74
File and Inode Modes Internals 75
Berkeley Treatment of Terminals 76
ttytab 77
ttys 78
gettytab 78
ttytype 79
Manager's Corner 80

CHAPTER 5 **Backups and Restores** 82

Backups: They Are More Complex Than You Think 82
How Precisely Do You Want to Be Able to Restore the Data? 82
Nonarchive (No Header File) 83
Archive (Header File) 83
Catalog (Online Data Base) 83
How Often Do You Need to Back Up Your Data? 83
Tape Storage 83
What Kind of Backup Medium Suits Your Site? 83
Quiescent Disks: The Impossible Dream 84
Backup Media Considerations 85
Backups to Floppy Diskette 85
Disk-to-Disk Backups 86
Backup to Tapes 86
Cartridge Tape 87
Data Base Backup Utilities 87
Backup Schedules 88
Backup, Archiving, and Copy Commands 89
Basic Backups and Restores with `dump` and `cpio` 89
`restore` 93
The `dump` Command: preSVR4 95
The Old `restore` Command 95
`cpio` or `dump`, That Is the Question 96
`tar` Versus `cpio` 96
SVR4 `backup` and `restore` commands 97
`finc` 98
`frec` 98
`volcopy` 98
Archiving 99
Current Issues 99
Manager's Corner 100

CHAPTER 6 **Security** 102

`passwd` 103
Backdoors 104
Guest Logins 105
Group Logins 105
Password Cleanups 105
`/etc/group` 108
Removing and Updating Users 109
sushi 109
Trojan Horse 110
Privilege: It's All or Nothing 111
`sulog` 111
Manager's Corner 111

Section II
UNIX Subsystems 115

CHAPTER 7 **Terminals and Other Asynchronous Character Devices, and Terminal I/O Theory 116**

Introduction 116
termio Theory 117
UNIX Takes Asynchronous I/O Devices in Its Stride 117
Serial Versus Parallel 117
Dumb Devices 118
Full-Duplex Versus Half-Duplex 118
Device Drivers 118
Data Flow 119
System Calls Revisited 119
Getting to the Device Driver 120
How Information Wends Its Way Through Device Drivers 120
termio.h 121
Control Characters 121
Input Modes 122
Output Modes 123
Control Modes 124
Line Disciplines 124
stty 125
Installing Terminals 125
Logins and gettys 125
/etc/ttys 126
tset 128
termcap 128
Looking for a Terminal in termcap 128
Adding a Terminal to AT&T System V 129
Adding a Terminal to BSD or XENIX 130
Manager's Corner 131

CHAPTER 8 **lp and lpr Printer Spooling Systems 132**

The System V lp Spooling System 132
Glossary 133
lp's File System 134
lp Administration Commands Summary 135
lpshut 135
lpadmin 135
Starting and Stopping Printing 135
accept 135
reject 136

enable 136
disable 136
Configuring lp 136
Adding Printers 136
Using lpadmin 136
-m model Option 137
-o Printer Interface Option 137
Review 137
Setting and Removing Classes: -c and -r 138
hardwire and login: -h and -l 138
Homemade Interface Programs: -i 138
Modifying Destinations 138
Routing Requests 139
LPDEST 139
Printer Status and lpstat 140
Canceling Requests 140
accept and reject Requests 141
enable and disable Requests 141
Changing Destinations: lpmove 141
lpsched Revisited and Reviewed 142
Printer Interfaces 142
Device Setup 143
Hardwire 143
Login Terminals 144
Enabling lp Reviewed 144
lpr: The Berkeley Printer Spooler 145
lpr's File System 146
printcap: The Heart of lpr 147
The Default Printer 149
lpd, the Printer Daemon 149
Access Control 149
Debugging 149
Remote Printers 150
Ports 150
Parallel Ports 151
Serial Ports 151
Manager's Corner 153

CHAPTER 9 **Modems 154**

RS-232 154
The DB-9 Connection 156
Hardware Handshaking: A Nontechnical Approach 156
Modem Ports: A Technical Approach 157
Contacting the Actual Modem 159
Switches and Settings 159
Return Codes 159
Echo Commands 159

Auto Answer 159
Carrier Detect 159
Telephone Line Connection 160
Command Recognition 160
DTR Monitor 160
Command Switching 160
Contacting the Modem 160
Setting ioctl/termio Characteristics 162
Setting /etc/gettydefs for Modem Calls 162
Manager's Corner 163

CHAPTER 10 accounting **164**

Report Output 165
An Overall Look at accounting 166
accounting Internals 167
Report Fields 168
Files and Directories 168
/usr/adm 169
nite 169
sum 170
fiscal 170
accounting Commands 170
Setup 171
rc 172
Administration 172
Interpreting the Data 173
Daily Report 174
Command Summaries 174
Last Login 175
Stability, Starts, and Stops 175
runacct 175
Manager's Corner 175

Section III
System Creation, Configuration, and Tuning 177

CHAPTER 11 **System Creation and Setup 178**

The Creation of New Systems 178
Release Levels: A Word to the Wise 178
Local Tools 180
Purchased Languages and Tools 180
Hardware Mishaps with First-Time System Creations 180

Systems Become Complicated Fast 181
Work Smarter with the System Engine Approach 181
A Home for Programmers 182
Distributing the Engine 183
Small-System Creation 183
Disk Initialization and Maintenance 184
`dkinit` 184
`fdisk` 185
`badtrk` 185
`divvy` 185
The Installation 186
System Migrations on Small Machines 187
Setting up a Sun Workstation 187
First Things First 188
The Smoke Test 188
Configuration 188
Reloading the System 189
Initial Configuration 189
Kernel Reconfiguration 190
`rc` 190
Configuring for Use 190
`etc/fstab` 191
YP 191
`/etc/printcap` 191
Access Control 191
Server Modifications 191
`sendmail` 192
Setting up a VAXserver 192
Planning Partitions 193
Basic Installation 194
Kernel Options 194
Mainframe Configuration 195
Disk Partitions 196
Configuration and sysgen 197
`sysgen` 198
`newsys` 199
How to Handle Bad Blocks 199
Marking Bad Spots 200
Mapping Bad Spots 200
Bad-Track Maps 200
Manager's Corner 202

CHAPTER 12 **Startup, Initiation, and Shutdown 204**

Booting the System 204
Initiation Levels: A System V State of Mind 206
System V Initiation 207

Berkeley I/O and Initiation 211
Knowing I/O 213
System V Shutdown 214
BSD Shutdown 217
Manager's Corner 217

CHAPTER 13 Custom and Deviant Systems 218

The Custom System 218
/etc 219
/etc/profile 219
cron 219
accounting 220
Networking 220
Backups 220
The Deviant System 221
Sometimes You Need to Fall Back and Regroup 222
Manager's Corner 223

CHAPTER 14 Configuration 225

UNIX System Configuration 225
AT&T System V Configuration 226
Making Your System Too Big 226
Making Your System Too Small 226
An Easily Configured System 227
Configuration Internals 227
Kernel Tables 228
Each Table Behaves Differently 229
Configuration Files and Parameters 229
The Plot Thickens 230
Tunable Parameters 231
NBUF 232
NHBUF 232
NPROC 232
MAXUP 232
NCLIST 232
NMOUNT 232
NINODE 233
NFILE 233
What Happens When You Configure and Install a UNIX System 233
In Search of Configuration Files 234
Start with the Header Files 234
Use UNIX to Help Search 235
Different Configuration Methods 236
The Burden Is on You 237

Talking to Hardware 237
The Transformation 239
Hardware Hints 239
Creative Disk Partitioning 240
Disk Address Protocol 241
Your Goal: 20 Percent Free Disk Addresses 242
Dos and Don'ts on Limits 242
Support Groups 242
Monitoring the Tables 242
The Configuration of the BSD 4.2 and 4.3 Systems 243
Where Is the Configuration File? 243
Locating the Configuration File 244
Know Your Hardware 244
Removing Unwanted Hardware References 245
Configuration File Formats 245
Global Definitions 246
System Image Definition 247
Device Definitions 248
Device Names 249
Drive Number 249
csr 249
Flags 250
Priority Levels 250
Vector Interrupts 250
A DEC Device Section 250
Sun Devices 251
Pseudodevices 251
The options Section 252
Making and Installing the 4.2 Kernel 253
It's Window Shade Time 253
Sun Kernel Installation 254
Servers for Diskless Clients 254
Manager's Corner 255

CHAPTER 15 **Sample Configurations 256**

A Release Move of a Large System 257
VAXserver Configuration 263
Kernel Configuration 264
The Global Section 265
Options 265
Configuration Section 266
Device Section 266
Pseudodevices 267
Manager's Corner 268

CHAPTER 16 **Tuning 270**

AT&T System V's sar Command 271
-a Flag 271
-b Flag 271
-u Flag 272
-d Flag 272
-q Flag 272
-w Flag 272
-v Flag 272
System Calls 273
crash **273**
BSD 4.2 and XENIX Tuning Diagnostics 274
iostat 274
uptime 275
vmstat 275
pstat 278
UTS's stats 280
Tunable Parameters and Their Effect on Performance 281
Tunable Parameters 281
NBUF 281
NPROC 282
MAXUP and MAXPROC 282
NCLIST 282
TEXT 283
NSWAP: Paging and Swapping 283
FILES and INODES 283
MOUNTS 284
CALLS 284
MAXPROC 284
Setting Table Sizes 284
Auxiliary Hardware: To Purchase or Not to Purchase 285
Solid-State Paging Devices 285
Learning How to Configure 285
Menu-Driven System Administration 286
Classic Tuning Administration 287
Manager's Corner 287

CHAPTER 17 **Crashes and Dumps: □□□□ □□□□ □□□□ DEAD 289**

DEAD **289**
D & D 290
Hung 291
Painfully Slow 292

Reading Dumps 293
Causes of Crashes 294
Prerequisites 295
osmbuff, /dev/osm, and /dev/error 295
Process Table 295
Stack Trace 296
File, Mount, and Inode Tables 296
Callout 296
Wallowing Through Memory 296
Manager's Corner 297

Section IV
Network Administration 299

CHAPTER 18 **Network Administration 300**

Networks 300
The Ethernet 300
Glossary 302
Packets 302
Getting Out 303
Getting In 303
Protocol Layers 303
Client–Server Relationships 303
TCP/IP Internals 304
Sockets 305
Important Network Files 305
NETSTART 306
NETSHUT 306
/etc/hosts 306
/etc/networks 307
localhosts 307
Network Tools 307
/etc/route and the Kernel Route Table 308
hostname 308
rwho 308
Troubleshooting the Local Network Software 309
Daemons 309
Network Addresses, Masks, and Broadcasts 310
Network Address Basics 311
Broadcasts 311
Subnet Masks 312
NFS 313
The Client–Server Relationship, Mounts,
and Key Files 313
A Manual Mount 313

rc: Mounting with Network File Systems 314
/etc/exports 315
NFS Interaction 315
NFS Problems 316
Mount Types and Related Problems 316
NFS Mount Failures 317
A Walk Through rc.local on an NFS System 318
portmap 319
biod 319
nfsd 320
rpc.mountd 320
Lock and Status Daemons 320
Removing Daemons from rc 320
Passwords Under NFS and YP 321
UUCP 321
UUCP Tasks 322
UUCP Files 322
UUCP Administration Commands 324
uuclean 325
uuqxt 325
Making a Connection with a Port or System 325
Mail 325
The mail/sendmail Model 327
Mail.rc and /.mailrc 327
sendmail in Practice 328
mqueue **329**
sendmail.cf: The Configuration File 330
/etc/aliases 333
Setting up sendmail 334
Simple Debugging 336
Manager's Corner 336

Section V
System Management **339**

CHAPTER 19 **Critical Services Administration: A New Approach 340**

Defining Critical Services 340
Identifying the Systems Critical to Your Site 341
Services That Are Handled by Existing System Software 342
Services That Need Software Protection 342
Services That Cannot Be Monitored with Software 342

Documenting Your System 343
SOPs and SAPs 343
New Manual Pages 343
Change Control 344
Tutorials 344
Solutions to Critical Service Problems 344
Watch Programs 345
Password Administration and Critical Services 345
Daemons: It Would Be Heck Without Them 346
Death of a Daemon 347
When Your Critical System Disks Runneth Over 348
Periodic Critical Services 349
Dealing with Critical Services 350
Critical Services Monitor 350
Relying on Common Sense 351
The Bottom Line 351
Manager's Corner 352

CHAPTER 20 **SOPs and SAPs 353**

Standard Operations Procedures 353
System Administration Procedures 356
Manager's Corner 361

CHAPTER 21 **The Organization 363**

Computer Organizations 363
Management Information Systems (MIS) 364
The Engineering Organization 364
Reconciling MIS and Engineering 364
Organizational Division 365
Operations 365
The Networking Staff 366
The Help Desk 367
The System Group 367
Working As a Single Organization 368
Organization Structure 368
Matrix Management 369
Technically Oriented Management 370
The Disadvantages of Nontechnical Management 370
How Managers Can Be More Effective Technically 370
Nontechnical Managers Can Inspire a Technical Staff 371
Managers Must Actually Know What Each Employee Does 371
Managers Must Be As Technically Current As Possible 372
Manager's Corner 372

CHAPTER 22 Service-Level Agreements 375
Definitions and Measurements 375
Downtimes 376
Unscheduled Downtimes 376
Severity Levels and Actions 376
Operator and Programmer Coverage 377
Print Centers 377
User IDs 377
User Requests and Problems 377
Tape Mounts 377
Tape Retention 378
Tape Security 378
Backups 378
Temporary Disks 378
Response Time 378
Problem Resolution 379
Resolution of Hardware Problems 379
Specific Software Support 379
How Often Should Service-Level Agreements Be Reviewed? 380
Wording 380
Manager's Corner 380

Section VI
System Administration Scenarios 381

CHAPTER 23 System Administration Scenarios 382
The File That Wouldn't Die, and Why 383
`lp` Won't Work, and Worse 383
`df` Shows No Disk Space But . . . 384
Terminal Won't Get Past Password 385
Wrong `TERM` Set in the User Environment 386
Failed Modem 387
Ethernet Can't Get Out 387
The Unmountable Disk Partition 388
Is Your System Really Hung? 389
The Printer Won't Write 390
No `getty` 391
Users Cannot Log On: Equipment Check 391
Corrupted Password File 392
Apparent Directory Corruption 393
System Generation Failure 394
TCP/IP Failures 395

UNIX/VM Scenarios 395
Filling punch Scenario 396
Hung Reader Scenario 397
Filling the Console Log Scenario 398
Machine Fails to Come Up to Multiuser Mode 398
Lost Cursor Control in X Windows 400
Boy Scouts 400
The Unkillable Process 401
Putting It All Together 402
Terminal in Open Mode 402
And Then Everything Went Wrong 403
Full `root` Disk 406
The `root` Partition Is Full, or Is It? 408
`root` Is Full—Again 410
Manager's Corner 411

Index 413
