Calculus Flanders

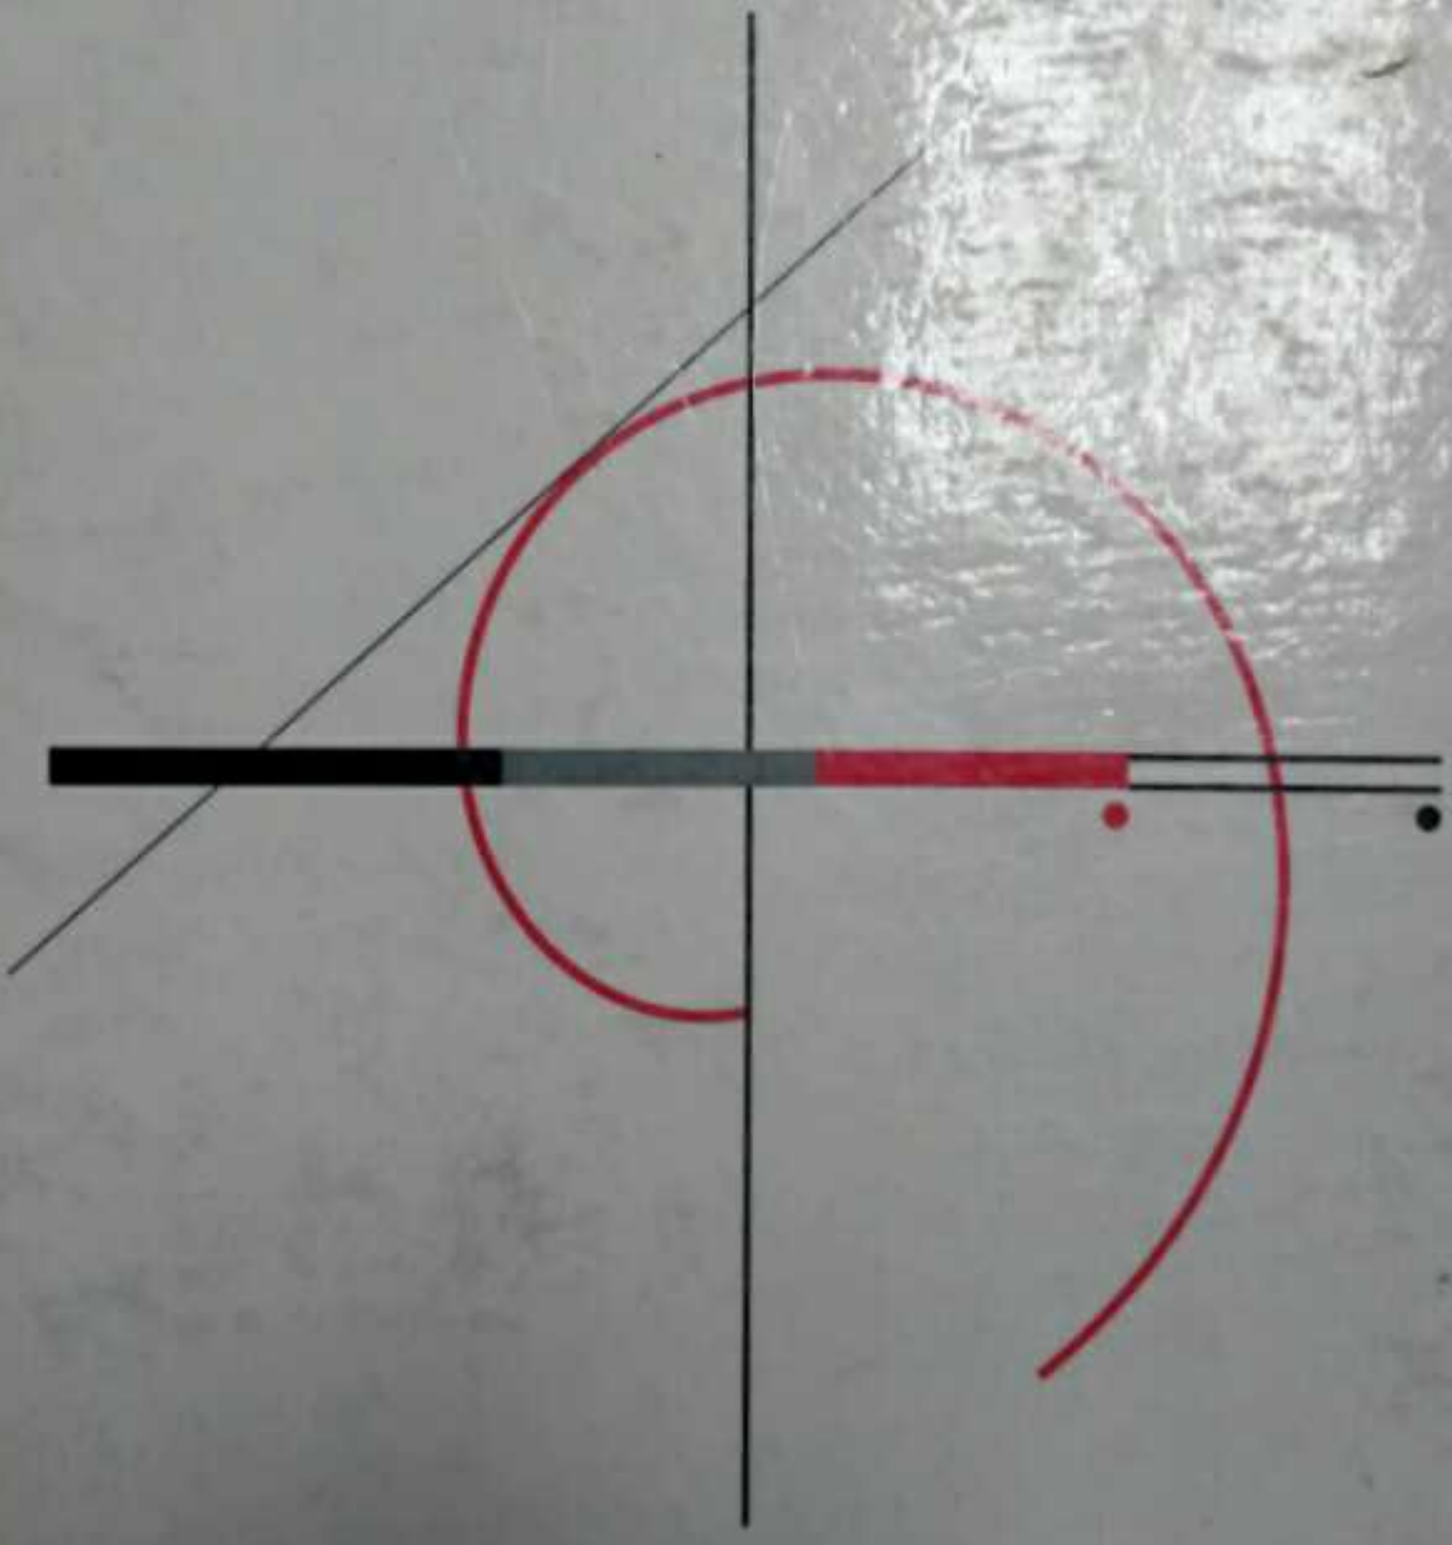

Table of Contents

	Preface	xi
1	**Functions and Graphs**	1
1-1	The Real Number System	2
1-2	Functions and Their Graphs	13
1-3	Linear and Quadratic Functions	21
1-4	Graphing Techniques	32
1-5	The Distance Formula	44
1-6	Sine and Cosine Functions	50
1-7	Additional Trigonometric Functions	56
1-8	Exponents and Exponential Functions	62
1-9	Review Exercises	66
2	**The Derivative**	67
2-1	The Slope Problem	67
2-2	Limits of Functions	71
2-3	Rules for Limits	80
2-4	More on Limits [Optional]	84

3 Continuous Functions
3-1 Derivative of a Function
3-2 Sums, Products, and Quotients
3-3 The Chain Rule
3-4 Trigonometric Functions
3-5 Implicit and Inverse Functions
3-6 Higher Derivatives
3-7 Review
3-8

4 Applications of Differentiation

4-1 Tangents, Graphs, and Approximation
4-2 Rectilinear Motion
4-3 Related Rates
4-4 Properties of Continuous and Differentiable Functions
4-5 Curve Sketching
4-6 Optimization
4-7 On Problem Solving
4-8 Further Applications
4-9 Second Derivative Test
4-10 Basic Theory and Proofs [Optional]
4-11 Review Exercises

5 Special Functions

5-1 Exponential Functions
5-2 Applications of Exponential Functions
5-3 The Logarithm Function
5-4 Applications of Logarithms
5-5 Inverse Trigonometric Functions
5-6 Hyperbolic Functions
5-7 Review Exercises

6 Integration

6-1 The Area Problem
6-2 Sums and Examples
6-3 The Fundamental Theorem
6-4 Applications
6-5 Inequalities and Estimates
6-6 Approximate Integration
6-7 Review Exercises

6	**Techniques of Integration**	326
6-1	Introduction	326
6-2	Differentials and Change of Variable	329
6-3	Examples of Substitutions	336
6-4	Integration by Parts	340
6-5	Use of Algebra	347
6-6	Change of Independent Variable	353
6-7	Rational Functions	359
6-8	Integral Tables and Loose Ends	366
6-9	Iteration Formulas	374
6-10	Review Exercises	378
7	**Applications of Integration**	379
7-1	Introduction	379
7-2	Area	381
7-3	Volume	386
7-4	Work	395
7-5	Fluid Pressure	400
7-6	Miscellaneous Applications	404
7-7	Review Exercises	413
8	**Analytic Geometry**	416
8-1	Translation and Circles	416
8-2	Intersections of Lines and Circles	421
8-3	Curves Defined Geometrically	426
8-4	Conics—The Parabola	430
8-5	Conics—The Ellipse	436
8-6	Conics—The Hyperbola	445
8-7	Polar Coordinates	451
8-8	Polar Graphs	457
8-9	Rotation of Axes	465
8-10	Review Exercises	470
9	**Numerical Calculus**	472
9-1	Mean Value Theorem	472
9-2	L'Hospital's Rule	477
9-3	Polynomial Approximation	484
9-4	Taylor Approximations	490
9-5	Taylor's Formula	497

9-6	Approximate Integration	504
9-7	Root Finding: Newton's Method	513
9-8	Review Exercises	521

10 Sequences and Series 523

10-1	Sequences and Limits	523
10-2	Properties of Limits	533
10-3	Infinite Series	541
10-4	Series of Positive Terms	546
10-5	Series with Positive and Negative Terms	553
10-6	Improper Integrals	559
10-7	Convergence and Divergence Tests	564
10-8	Relation between Integrals and Series	569
10-9	Review Exercises	573

11 Power Series 574

11-1	Convergence and Divergence	574
11-2	Taylor Series	581
11-3	Expansion of Functions	588
11-4	Calculus of Power Series	596
11-5	Binomial Series [Optional]	603
11-6	Review Exercises	607

12 Space Geometry 609

12-1	Rectangular Coordinates	609
12-2	Vector Algebra	611
12-3	Length and Inner Product	618
12-4	Lines and Planes	623
12-5	Linear Systems	629
12-6	Cross Product	636
12-7	Applications of the Cross Product	643
12-8	Review Exercises	649

13 Vector Functions 653

13-1	Differentiation	653
13-2	Arc Length	659
13-3	Plane Curves	663
13-4	Curvature	667
13-5	Space Curves	681

13-6	Velocity and Acceleration	684
13-7	Plane Curves in Polar Coordinates	690
13-8	Review Exercises	697
14	**Functions of Several Variables**	**698**
14-1	Functions and Graphs	699
14-2	Partial Derivatives	706
14-3	Gradients and Directional Derivatives	715
14-4	Surfaces and Tangent Planes	723
14-5	Parametric Surfaces and Surfaces of Revolution	730
14-6	Differentials and Approximation	735
14-7	Differentiable Functions	744
14-8	Review Exercises	750
15	**Surfaces and Optimization**	**751**
15-1	Quadric Surfaces	751
15-2	Optimization: Two Variables	759
15-3	Optimization: Three Variables	766
15-4	Lagrange Multipliers: Two Variables	772
15-5	Lagrange Multipliers: Three Variables	778
15-6	Review Exercises	784
16	**Higher Partial Derivatives**	**785**
16-1	Mixed Partials	785
16-2	Taylor Approximations	793
16-3	Second Derivative Test: Two Variables	798
16-4	More on Stability	804
16-5	Theory [Optional]	808
16-6	Review Exercises	816
17	**The Double Integral**	**818**
17-1	The Volume Problem	819
17-2	Rectangular Domains	823
17-3	Domains between Graphs	832
17-4	Arbitrary Domains	839
17-5	Polar Coordinates	844
17-6	Applications	853
17-7	Physical Applications	861
17-8	Approximate Integration [Optional]	869
17-9	Review Exercises	875

18	**Multiple Integrals**	877
18-1	Triple Integrals	877
18-2	Cylindrical Coordinates	885
18-3	Spherical Coordinates	892
18-4	Center of Gravity and Moments of Inertia	900
18-5	Line Integrals	907
18-6	Green's Theorem	914
18-7	Surface Integrals	921
18-8	Theorems of Gauss and Stokes	927
18-9	Review Exercises	935
19	**Differential Equations**	937
19-1	Separation of Variables	937
19-2	First Order Linear Equations	944
19-3	Applications	951
19-4	Second Order Equations	959
19-5	Applications to Vibration	969
19-6	Numerical Methods	976
19-7	Review Exercises	983
	Answers to Odd-numbered Exercises	A1
	Index	I1
