Microprocessors and Interfacing

Programming and Hardware

Third Edition

DOUGLAS V. HALL

SEMINAR LIBRARY
Department of Computer Science
UNIVERSITY OF KARACHI

Contents

Preface v
Acknowledgements xiv

1. Computer Number Systems, Codes, and Digital Devices 1.1–1.20

Computer Number Systems and Codes *1.1*
Arithmetic Operations on Binary, HEX, and BCD Numbers *1.7*
Basic Digital Devices *1.12*
Review Questions and Problems *1.19*

2. Computers, Microcomputers, and Microprocessors —An Introduction 2.1–2.21

Types of Computers *2.1*
How Computers and Microcomputers are Used—An Example *2.2*
Overview of Microcomputer Structure and Operation *2.6*
Execution of a Three-instruction Program *2.7*
Microprocessor Evolution and Types *2.9*
The 8086 Microprocessor Family—Overview *2.11*
8086 Internal Architecture *2.12*
Introduction to Programming the 8086 *2.16*
Review Questions and Problems *2.20*

3. 8086 Family Assembly Language Programming—Introduction 3.1–3.32

Program Development Steps *3.1*
Constructing the Machine Codes for 8086 Instructions *3.12*
Writing Programs for Use with an Assembler *3.19*
Assembly Language Program Development Tools *3.26*
Review Questions and Problems *3.29*

4. Implementing Standard Program Structures in 8086 Assembly Language 4.1–4.36

Simple Sequence Programs *4.1*
Jumps, Flags, and Conditional Jumps *4.8*
If-Then, If-Then-Else, and Multiple If-Then-Else Programs *4.15*
While-Do Programs *4.20*
Repeat-Until Programs *4.22*
Instruction Timing and Delay Loops *4.31*
Review Questions and Problems *4.33*

5. Strings, Procedures, and Macros 5.1–5.4

The 8086 String Instructions *5.1*
Writing and Using Procedures *5.6*
Writing and Using Assembler Macros *5.37*
Review Questions and Problems *5.39*

6. 8086 Instruction Descriptions and Assembler Directives 6.1–6.3

Instruction Descriptions *6.1*
Assembler Directives *6.30*
Assume *6.31*
DB—Define Byte *6.31*
DD—Define Doubleword *6.31*
DQ—Define Quadword *6.31*
DT—Define Ten Bytes *6.31*
DW—Define Word *6.32*
END—End Program *6.32*
ENDP—End Procedure *6.32*
ENDS—End Segment *6.32*
EQU—Equate *6.32*
EVEN—Align on Even Memory Address *6.32*
EXTRN *6.33*
GLOBAL—Declare Symbols as Public or Extrn *6.33*
GROUP—Group-related Segments *6.33*
INCLUDE—Include Source Code From File *6.33*
LABEL *6.34*
LENGTH—Not Implemented in IBM MASM *6.34*
NAME *6.34*
OFFSET *6.34*
ORG—Originate *6.34*
PROC—Procedure *6.35*
PTR—Pointer *6.35*
Segment *6.35*
Short *6.35*
Type *6.36*

7. 8086 System Connections Timing, and Troubleshooting 7.1–4.

A Basic 8086 Microcomputer System *7.1*
Using a Logic Analyzer to Observe Microprocessor Bus Signals *7.7*
An Example Minimum-mode System, The SDK-86 *7.12*
Troubleshooting a Simple 8086-based Microcomputer *7.42*
Review Questions and Problems *7.47*

. 8086 Interrupts and Interrupt Applications 8.1–8.

8086 Interrupts and Interrupt Responses *8.1*
Hardware Interrupt Applications *8.12*
8254 Software-Programmable Timer/Counter *8.17*

8259A Priority Interrupt Controller *8.30*
Software Interrupt Applications *8.39*
Review Questions and Problems *8.41*

9. Digital Interfacing **9.1–9.50**

Programmable Parallel Ports and Handshake Input/Output *9.1*
Interfacing a Microprocessor to Keyboards *9.17*
Interfacing to Alphanumeric Displays *9.25*
8279 Circuit Connections and Operation Overview *9.28*
Interfacing to 18-segment and Dot-matrix Led Displays *9.35*
Interfacing a Microcomputer to Nonmultiplexed Led Displays *9.36*
Interfacing Microcomputer Ports to High-power Devices *9.37*
Optical Motor Shaft Encoders *9.44*
Review Questions and Problems *9.47*

10. Analog Interfacing and Industrial Control **10.1–10.60**

Review of Operational-amplifier Characteristics and Circuits *10.2*
Sensors and Transducers *10.7*
D/A Converter Operation, Interfacing, and Applications *10.13*
A/D Converter Specifications, Types, and Interfacing *10.17*
A Microcomputer-based Scale *10.21*
A Microcomputer-based Industrial Process-control System *10.31*
An 8086-based Process-control System *10.35*
Developing the Prototype of a Microcomputer-based Instrument *10.46*
Robotics and Embedded Control *10.47*
Digital Signal Processing and Digital Filters *10.52*
Review Questions and Problems *10.59*

11. Dma, Drams, Cache Memories, Coprocessors, and Eda Tools **11.1–11.49**

Introduction *11.2*
The 8086 Maximum Mode *11.4*
Direct Memory Access (DMA) Data Transfer *11.5*
Interfacing and Refreshing Dynamic RAMs *11.10*
A Coprocessor—The 8087 Math Coprocessor *11.23*
Computer-based Design and Development Tools *11.39*
Review Questions and Problems *11.48*

12. C, a High-level Language for System Programming **12.1–12.52**

Introduction—A Simple C Program Example *12.2*
Program Development Tools for C *12.3*
Programming in C *12.7*
Review Questions and Problems *12.50*

13. Microcomputer System Peripherals **13.1–13.59**

System-level Keyboard Interfacing *13.1*
Microcomputer Displays *13.5*
Computer Mice and Trackballs *13.31*

Computer Vision 13.33
Magnetic-disk Data-storage Systems 13.34
Optical Disk Data Storage 13.49
Printer Mechanisms and Interfacing 13.50
Speech Synthesis and Recognition with a Computer 13.58
Digital Video Interactive 13.55
Review Questions and Problems 13.57

14. Data Communication and Networks 14.1–14.51

Introduction to Asynchronous Serial Data Communication 14.1
Serial-data Transmission Methods and Standards 14.8
20- and 60-ma Current Loops 14.9
Asynchronous Communication Software on the IBM PC 14.23
Synchronous Serial-data Communication and Protocols 14.35
Local Area Networks 14.40
The GPIB, HPIB, IEEE488 Bus 14.48
Review Questions and Problems 14.50

15. The 80286, 80386 and 80486 Microprocessors 15.1–15.46

Multiuser/Multitasking Operating System Concepts 15.2
The Intel 80286 Microprocessor 15.11
The Intel 80386 32-bit Microprocessor 15.16
The Intel 80486 Microprocessor 15.41
Review Questions and Problems 15.44

16. An Introduction to the Pentium Processors 16.1–16.19

The Pentinum Processor 16.2
Epilogue 16.18
Review Questions and Problems 16.19

Appendix A A.1–A.13
Appendix B B.1–B.16
Appendix C C.1–C.2
Bibliography Bib.1–Bib.3
Index I.1–I.25
