Detailed Contents

1 1 Introduction and Overview

I The Basic System Resources

2 Hardware

9 Overview
9 The Mainframe: Main Memory
12 The Mainframe: The Central Processing Unit
14 The Mainframe: Registers
15 The Mainframe: The Whole Package
16 The Front End: Input and Output Devices
20 The Back End: Secondary Storage

22 Interfaces, Control Units, and Channels
26 The Computer System
28 Summary

3 Software and Data

30 Overview
31 Software and Data: Logical vs. Physical
31 The Source of Software
35 The Source of Data
36 Physically Storing Data
39 Data Management
39 Locating Files
40 The Relative Record Address
42 File Organizations
48 The Access Methods
50 Program Libraries
50 Data Base Management
53 Summary

4 Linking the System Components

56 Overview
57 Internal Linkage: The Bus Lines
58 A Machine Cycle
62 Architectures
62 Linking the External Devices
65 Logical vs. Physical I/O
67 I/O Control and the Operating System
68 Summary

II Operating System Development

5 Single Program Systems

73 Overview
74 Job-to-Job Transition
80 On-the-Machine Efficiency

87 Memory Management
89 Data Management
90 A Single Program or Serial Batch Operating System
92 Summary

6 Multiprogramming and Time-Sharing

93 Overview
94 Input/Output vs. Processing Speed in the Third Generation
99 Allocating CPU Time
101 Main Memory Allocation
105 Registers
105 I/O Device Allocation
107 Control of Data Resources
110 The Operating System
111 Summary

III Communicating with the Operating System

7 Command Languages and Job Control Languages

117 Overview
118 The Functions of a Command Language
119 The Sources of the Commands
122 A Microcomputer Command Language: CP/M
124 A Large Time-Shared System
125 Job Control Languages
125 Summary

8 Job Control under IBM's Disk Operating System

127 Overview
128 The DOS JOB Statement

134 Cataloging Programs
136 DOS I/O Job Control Functions
140 Other DOS Job Control Functions
141 Cataloged Procedures
142 The System Command Language
142 Summary

9 Job Control Language for the IBM Operating System/360 and System/370—JOB and EXEC Statements

145 Overview
146 Job Control Language Statements
146 Jobs and Job Steps
148 Cataloged Procedures
149 The Language—Basic Parameters
151 The JOB Statement
155 Continuing a JCL Statement
155 The EXEC Statement
159 Summary

10 The DD Statement

160 Overview
161 The DD Statements and Data Control Blocks
166 Unit Record Equipment
168 Magnetic Disk
176 Magnetic Tape
182 The System Input and System Output Devices
183 Job Step Qualifiers on a DD Statement
184 Libraries
185 The PROC Statement
186 A Complete Example
188 Summary

11 Libraries and the Linkage Editor

190 Overview
191 The Compile/Link Edit/Execute Sequence
193 Compilers and Source Statement Libraries
196 Creating a Library (IBM)
199 Adding Members to the Library
201 Using a Private Source Statement Library

203 Object Modules
206 Building a Load Module
209 Using the Linkage Editor (IBM)
214 Creating a Load Module Library
216 The Loader (IBM)
217 Summary

IV Operating System Concepts

12 Basic Operating System Concepts

223 Overview
224 The Functions of an Operating System
225 Measures of Effectiveness
226 Conflicting Objectives
227 Constraints
227 Stating System Objectives
228 Evaluating an Operating System
229 The Microcomputer System Environment
231 The Geography of a Microcomputer Operating System
233 Creating the Operating System—System Generation
234 Initial Program Loading—Cold Start
235 Warm Start
236 An Example—CP/M
241 Summary

13 Multiuser Systems

244 Overview
245 Multiprogramming and Time-Sharing
247 Memory Allocation and Memory Management
259 Processor Management and Internal Priorities
272 I/O Device Allocation
275 Scheduling and External Priorities

14 Segmentation, Paging, and Virtual Memory

285 Overview
285 Multiprogramming and Processor Efficiency
286 Segmentation
292 Paging
295 Segmentation and Paging
298 Segmentation Systems and Paging Systems—Conclusions
299 Virtual Memory
305 Implementing Virtual Memory
310 Summary

15 Operating Principles of the IBM System/370

313 Overview
313 Addressing Memory on the IBM System/370
314 The Program Status Word
320 Controlling I/O
324 Interrupt Concept
327 Interrupt Types
333 Permanent Storage Assignments
333 Masking
336 Program States
337 Interrupt Priority
338 A Typical Example
344 The Program Status Word—EC Mode
346 Summary

16 IBM System/370 Disk Operating System/Virtual Storage

349 Overview
350 DOS/VS System Geography
352 Loading Application Programs
355 Multiprogramming and the Physical I/O Control System
358 The Logical Input/Output Control System
358 Multiprogramming Summary
360 Memory M

361 Processor Management
361 I/O Device Control
364 Job Queuing and External Priorities
365 Librarian Functions
365 Summary

17 IBM System/370 OS/VS1

369 Overview
370 The Basic Structure of OS/VS1
372 Jobs and Tasks
378 Task Management
379 Typing Things Together—Basic VS1 Control Blocks
382 An Example
397 I/O Controls under OS/VS1
402 Data Management
402 System Generation and Flexibility
403 OS/VS1 Limits
404 Summary

18 Trends and Alternatives in Operating System Design

408 Overview
409 Alternative Architectures
414 Trends in Computer Development
415 The Large Machine Trend: The Supercomputers
420 Microcomputers and the Trend toward Small Machines
420 Networks
421 Multiprocessing
428 The Migration from Software to Hardware
429 Summary

V System Software

433 Overview of Part V

☐ 19 Data Communication Monitors

435 Overview
435 The Need for Data Communications
436 Basic Data Communication Concepts: Modulation/Demodulation
442 The Intelligent Component—Data Communication Software
449 The Data Communication Monitor
450 Trends in Data Communication
451 Summary

☐ 20 Data Base Management

454 Overview
455 Early Computer Applications—Cost Justifica
456 The Customized File Approach
461 The Central Data Base Concept
469 Implementing the Data Base Concept
476 Summary

☐ 21 A Brief Survey of Commercial Softwa

479 Overview
479 What Is Commercial Software?
480 System-level Support Software
482 Software Development Support
483 Support for Nonprogrammers
484 Application Software
485 The Commercial Software Market
486 Summary

☐ A 487 Appendix A: Number Systems, Data Types, and Codes

☐ B 495 Appendix B: A Summary of DOS Job

C 500 Appendix C: Summary of Job Control Language for the IBM System/360 and System/370 Operating System

513 Index
