Principles of ARTIFICIAL INTELLIGENCE EXPERT SYSTEMS DEVELOPMENT

David W. Rolston

Contents

Preface xi

Chapter 1. An Introduction to Expert Systems 1

1.1 Definition of an Expert System 2
1.2 History of Expert System Development 3
1.3 Analysis of Expert Problem Solving 3
1.4 Role of Knowledge in Expert Systems 4
1.5 Analysis of Knowledge 5
1.6 Architecture of Expert Systems 6
1.7 Programming Languages for Expert Systems 11
1.8 Development Process 12
1.9 Current State of Expert System Development 13

Chapter 2. Artificial Intelligence Problem-Solving Concepts 15

2.1 The Two-Pail Problem 16
2.2 Analysis of Artificial Intelligence Techniques 17
2.3 Criteria for Success 20
2.4 Problem Solving in Artificial Intelligence 21

Chapter 3. Knowledge Representation and Formal Logic 31

3.1 Knowledge Components 31
3.2 Representation Evaluation Criteria 32
3.3 Level of Representation 33
3.4 Knowledge Representation Schemes 34
3.5 Formal Logic 34
3.6 Knowledge Engineering Using Formal Logic 40
3.7 Inference Processes 37

Chapter 4. Nonformal Knowledge Representation 47

4.1 Semantic Networks 47
4.2 Frames 51
4.3 Scripts 54
4.4 Production Systems 56

Chapter 5. Problem-Solving Strategies 67

5.1 Exhaustive Search 67
5.2 Large Search Spaces 68
5.3 Generate and Test 68
5.4 Space Transformation 70
5.5 Planning 72
5.6 Least-Commitment Principle and Constraint Propagation 82
5.7 Classification Model 83
5.8 Blackboard Model 85

Chapter 6. Dealing with Uncertainty 89

6.1 Reasoning Based on Partial Information 90
6.2 Nonmonotonic Reasoning 90
6.3 Truth Maintenance System 93
6.4 Reasoning Based on Probability 98
6.5 Certainty Factors 99
6.6 Fuzzy Reasoning 106

Chapter 7. Explanation Facilities 113

7.1 Basic Explanation—Focus on Debugging 114
7.2 Causal Models 120
7.3 PRESS—Explanation Focus on Status 122
7.4 CLEAR—Explanation Focus on Clarification 125
7.5 XPLAIN—Explanation Focus on Rationalization 128
7.6 Explanation for Training 132
7.7 Online User Aid 135

Chapter 8. The Expert System Development Process 137

8.1 Expert Systems and Software Engineering 137
8.2 Expert System Development Life Cycle 140
8.3 Problem Selection 141
8.4 Prototype Construction 146
8.5 Formalization 148
8.6 Implementation 152
8.7 Evaluation 155
8.8 Long-Term Evolution 156

Chapter 9. Knowledge Acquisition 157

9.1 Expert–Knowledge Engineer Interactions 157
9.2 Cognitive Behavior 160
9.3 Knowledge Acquisition Techniques 161
9.4 Sample Problem Implementation 161
9.5 Concept Formulation 164
9.6 Knowledge Representation Development 165
9.7 Knowledge Acquisition for Core Problems 165
9.8 Use of Multiple Experts 166
9.9 Knowledge Acquisition without Knowledge Engineers 167

Chapter 10. Expert System Tools

10.1 Languages for Expert System Development 169
10.2 Expert System Shells 170
10.3 Narrow Tools 171
10.4 Lisp Machines 172
10.5 Large Hybrid Expert System Tools 173
10.6 PC-Based Expert System Tools 174
10.7 Knowledge Acquisition Tools 176
177

Chapter 11. Inference Based on Formal Logic

11.1 Resolution with Ground Clauses 179
11.2 Unification 179
11.3 Resolution in Predicate Logic 184
186

Chapter 12. An Example of a Multiparadigm Expert System

12.1 User Interface 189
12.2 Internal Design Overview 190
12.3 Fault Resolution Kernel 192
12.4 Component Knowledge Base 194
12.5 Representation of State 204
12.6 Mixed-Initiative Processing 205
12.7 Predictive Maintenance 206
12.8 File and Media Recovery 209
12.9 Explanation 211
12.10 Support Tools 212
12.11 Analysis of Results 213
12.12 Future Directions for Expert Systems 213
215

Appendix A. Lisp Programming

A.1 Lisp Theory 217
A.2 Functional Programming 217
A.3 Variable Assignment and Function Definition 219
A.4 List Manipulation 219
A.5 Dynamic Memory Management 222
A.6 Control 224
A.7 Additional Lisp Functions 225
228

Appendix B. Prolog Programming

B.1 Theoretical Concepts 229
B.2 Basic Programming Elements and Syntax 229
B.3 Inference in Prolog 230
B.4 Explicit Control in Prolog 234
B.5 Prolog Program Example 241
242

Bibliography 245
