With Compliments of

McGraw-Hill International Book Co.
P. O. Box 721
Room 202, 1st Floor, Rex Avenue
Abdullah Haroon Road,
Karachi-3

INTERNATIONAL STUDENT EDITION

McGRAW-HILL KOGAKUSHA, LTD.

Tokyo Auckland Bogota Guatemala Hamburg Johannesburg
Lisbon London Madrid Mexico New Delhi Panama
Rangoon San Jose Sao Paulo Singapore Sydney

List of Examples	xi
Preface	xiii

1	Introduction	1
---	--------------	---

Part 1 Process Control

2	Why the Control Chart Works; Some Statistical Concepts	33
3	Why the Control Chart Works; Some Examples	75
4	Directions for Simple \bar{X} and R Charts	116
5	Rational Subgrouping; Analyzing and Controlling Variation	152
6	Some Fundamentals of the Theory of Probability	170
7	The Control Chart for Fraction Rejected	221
8	The Control Chart for Nonconformities	254
9	Some Special Process Control Procedures	276
10	Some Aspects of Specifications and Tolerances	317
11	Some Aspects of the Relationship between Control Charts and Certain Other Statistical Techniques	347

Part 2 Acceptance Sampling

12	Some Fundamental Concepts in Acceptance Sampling	359
13	The Dodge-Romig System for Lot-by-Lot Acceptance Sampling by Attributes	390

14	An AQL System for Lot-by-Lot Acceptance Sampling by Attributes (ABC-STD-105)	412
15	Certain Other Plans for Lot-by-Lot Acceptance Sampling by Attributes	447
16	Acceptance Inspection for Continuous Production	475
17	Acceptance Sampling by Variables	492
18	Some Aspects of Life Testing and Reliability	534

Part 3 Some Related Topics

19	Some Economic Aspects of Quality Decisions	579
20	Demonstrating the Operation of Systems of Chance Causes	599
21	The Widespread Usefulness of Control Charts and Acceptance Sampling Procedures	605

Appendixes

1	Glossary of Symbols	615
2	Bibliography	621
3	Tables	627
A	Area under the Normal Curve	628
B	Factors for Estimating σ' from \bar{R} or $\bar{\sigma}$	630
C	Factors for Determining from \bar{R} the 3-Sigma Control Limits for \bar{X} and R Charts	631
D	Factor for Determining from $\bar{\sigma}$ the 3-Sigma Control Limits for \bar{X} and σ Charts	632
E	Factors for Determining from σ' the 3-Sigma Control Limits for \bar{X} , R , and σ Charts	633
F	3-Sigma Control Limits for Control Charts for Per Cent Rejected	634
G	Summation of Terms of Poisson's Exponential Binomial Limit	636
H	Logarithms of Factorials	641
J	Logarithms of Numbers	646
K	Sample Size Code Letters—MIL-STD-105D (ABC Standard)	648
L	Master Table for Normal Inspection (Single Sampling)—MIL-STD-105D (ABC Standard)	649
M	Master Table for Tightened Inspection (Single Sampling)—MIL-STD-105D (ABC Standard)	650

P	Master Table for Tightened Inspection (Double Sampling)— MIL-STD-105D (ABC Standard)	653
Q	Master Table for Reduced Inspection (Double Sampling)— MIL-STD-105D (ABC Standard)	654
R	Master Table for Normal Inspection (Multiple Sampling)— MIL-STD-105D (ABC Standard)	655
S	Master Table for Tightened Inspection (Multiple Sampling)— MIL-STD-105D (ABC Standard)	657
T	Master Table for Reduced Inspection (Multiple Sampling)— MIL-STD-105D (ABC Standard)	659
U	Average Outgoing Quality Limit Factors for Normal Inspection (Single Sampling)—MIL-STD-105D (ABC Standard)	661
V	Average Outgoing Quality Limit Factors for Tightened Inspection (Single Sampling)—MIL-STD-105D (ABC Standard)	662
W	Limit Numbers for Reduced Inspection—MIL-STD-105D (ABC Standard)	663
X	Some Factors for Use in Acceptance Sampling by Variables	664
Y	Operating Characteristics of Certain Unknown-Sigma and Known-Sigma Variables Acceptance Plans for One-Sided Specifications	666
Z	Random Numbers	668
	Index	669

LIST OF EXAMPLES

1-1	\bar{X} and R Charts. Experimental Control Charts for Process Control	8
1-2	\bar{X} and R Charts. Revision of Tolerances	14
1-3	Weakness of a Common Acceptance Sampling Scheme	20
2-1	A Use of a Frequency Distribution to Accomplish a Cost Saving	39
3-1	Shift in Process Average of Acidity of Dye Liquor	93
3-2	Shift in Quality Level of Steel Castings	95
3-3	Use of \bar{X} Chart to Prevent Too-Frequent Changes in Process Centering	107
4-1	Use of Control Charts by a Purchaser to Help a Vendor Improve His Process	131
4-2	An Unsound Proposal for Sorting Product into Classes	134
4-3	Milling a Slot in an Aircraft Terminal Block. An Example to Illustrate the Steps in the Use of \bar{X} and R Charts on a Manufacturing Operation	138
5-1	Setting of Thermostatic Controls. Compensation for the Differences between Operators	158
5-2	Thickness of Pads on Half-Ring Engine Mount. An Example in which Subgroups Were Taken in a Way that Made Evidence of Lack of Control Have No Practical Value	160
5-3	Process Capability Study of Glass Stresses in Glass-to-Wire Seal	164
7-1	Illustration of Calculations Necessary for Control Chart for Fraction Rejected	228
7-2	An Illustration of the Selection of Quality Characteristics for Charts for Fraction Rejected	234
8-1	Control Chart for Nonconformities	257
8-2	A Control Chart for Nonconformities per Unit with Variable Subgroup Size	264
9-1	Determining the Initial Machine Setting When a Trend Is Expected in the Value of a Dimension	298
9-2	Process Control by np Chart Based on Gage Tolerances That Are Tighter than Specification Tolerances	303
10-1	Establishment of Tolerance Limits by Pilot Runs	323
10-2	Tolerances at Intermediate Stages in Manufacturing Electrical Cable	326
10-3	An Illustration of the Statistical Relationship among Specified Nominal Dimensions, Tolerances, and Fits and Clearances	328
