<i>List of contributors</i>	ix
<i>Introduction D.J. Hand</i>	xv
PART ONE Statistical expert systems	1
1 DEXPERT: an expert system for the design of experiments T.J. Lorenzen, L.T. Truss, W.S. Spangler, W.T. Corpus and A.B. Parker	3
2 Inside two commercially available statistical expert systems J.F.M. Raes	17
3 AMIA: Aide à la Modélisation par l'Intelligence Artificielle (expert system for simulation modelling and sectoral forecasting) M. Ollivier, R. Arrus, M.-A. Durillon, S. Robert and B. Debord	31
4 An architecture for knowledge-based statistical support systems A. Prat, E. Edmonds, J.M. Catot, J. Lores, J. Galmes and P. Fletcher	39
5 Enhancing explanation capabilities of statistical expert systems through hypertext P. Hietala	46
6 Measurement scales as metadata D.J. Hand	54
PART TWO Belief networks	65
7 On the design of belief networks for knowledge-based systems B. Abramson	67
8 Lack-of-information based control in graphical belief systems	82

vi Contents

9	Adaptive importance sampling for Bayesian networks applied to filtering problems A.R. Runnalls	90
10	Intelligent arc addition, belief propagation and utilization of parallel processors by probabilistic inference engines A. Ranjbar and M. McLeish	106
11	A new method for representing and solving Bayesian decision problems P.P. Shenoy	109
PART THREE Learning		139
12	Inferring causal structure in mixed populations C. Glymour, P. Spirtes and R. Scheines	141
13	A knowledge acquisition inductive system guided by empirical interpretation of derived results K. Tsujino and S. Nishida	156
14	Incorporating statistical techniques into empirical symbolic learning systems F. Esposito, D. Malerba and G. Semeraro	168
15	Learning classification trees W. Buntine	182
16	An analysis of two probabilistic model induction techniques S.L. Crawford and M. Fung	202
PART FOUR Neural networks		215
17	A robust back propagation algorithm for function approximation D.S. Chen and R.C. Jain	217
18	Maximum likelihood training of neural networks H. Gish	241
19	A connectionist knowledge acquisition tool: CONKAT A. Ultsch, R. Mantyk and G. Halmans	256
20	Connectionist, rule-based, and Bayesian decision aids: an empirical comparison S. Schwartz, J. Wiles, I. Gough and S. Phillips	264
PART FIVE Text manipulation		279
21	Statistical approaches to aligning sentences and identifying word correspondences in parallel texts: a report on work in progress	28

22 Probabilistic text understanding	295
R.P. Goldman and E. Charniak	
23 The application of machine learning techniques in subject classification	312
I. Kavanagh, C. Ward and J. Dunnion	
PART SIX Other areas	325
24 A statistical semantics for causation	327
J. Pearl and T.S. Verma	
25 Admissible stochastic complexity models for classification problems	335
P. Smyth	
26 Combining the probability judgements of experts: statistical and artificial intelligence approaches	348
L.A. Cox	
27 Randomness and independence in non-monotonic reasoning	362
E. Neufeld	
28 Consistent regions in probabilistic logic when using different norms	370
D. Bouchaffra	
29 A decision theoretic approach to controlling the cost of planning	387
L. Hartman	
Index	401
