About the author	xiv
Preface	xv
Acknowledgements	xix

## 1 Introduction

1.1 Applications	23
1.1.1 Vehicles	23
1.1.2 Emergencies	24
1.1.3 Business	24
1.1.4 Replacement of wired networks	25
1.1.5 Infotainment and more	25
1.1.6 Location dependent services	25
1.1.7 Mobile and wireless devices	27
1.2 A short history of wireless communication	29
1.3 A market for mobile communications	35
1.4 Some open research topics	36
1.5 A simplified reference model	38
1.6 Overview	40
1.7 Review exercises	43
1.8 References	43

## 2 Wireless transmission

2.1 Frequencies for radio transmission	46
2.1.1 Regulations	47
2.2 Signals	51
2.3 Antennas	52
2.4 Signal propagation	55
2.4.1 Path loss of radio signals	56
2.4.2 Additional signal propagation effects	57
2.4.3 Multi-path propagation	59

## Mobile communications

<b>2.5</b>	Multiplexing	
2.5.1	Space division multiplexing	61
2.5.2	Frequency division multiplexing	63
2.5.3	Time division multiplexing	64
2.5.4	Code division multiplexing	65
<b>2.6</b>	Modulation	66
2.6.1	Amplitude shift keying	68
2.6.2	Frequency shift keying	69
2.6.3	Phase shift keying	69
2.6.4	Advanced frequency shift keying	70
2.6.5	Advanced phase shift keying	71
2.6.6	Multi-carrier modulation	73
<b>2.7</b>	Spread spectrum	74
2.7.1	Direct sequence spread spectrum	76
2.7.2	Frequency hopping spread spectrum	79
<b>2.8</b>	Cellular systems	81
<b>2.9</b>	Summary	84
<b>2.10</b>	Review exercises	85
<b>2.11</b>	References	86

<b>3</b>	<b>Medium access control</b>	89
<b>3.1</b>	Motivation for a specialized MAC	90
3.1.1	Hidden and exposed terminals	90
3.1.2	Near and far terminals	91
<b>3.2</b>	SDMA	92
<b>3.3</b>	FDMA	93
<b>3.4</b>	TDMA	
3.4.1	Fixed TDM	94
3.4.2	Classical Aloha	95
3.4.3	Slotted Aloha	96
3.4.4	Carrier sense multiple access	96
3.4.5	Demand assigned multiple access	97
3.4.6	PRMA packet reservation multiple access	98
3.4.7	Reservation TDMA	99
3.4.8	Multiple access with collision avoidance	99
3.4.9	Polling	102
3.4.10	Inhibit sense multiple access	102
<b>3.5</b>	CDMA	
3.5.1	Spread Aloha multiple access	107

<b>3.6</b>	Comparison of S/T/F/CDMA	109
<b>3.7</b>	Review exercises	111
<b>3.8</b>	References	112

## **4 Telecommunications systems**

<b>4.1</b>	GSM	113
4.1.1	Mobile services	118
4.1.2	System architecture	120
4.1.3	Radio interface	125
4.1.4	Protocols	130
4.1.5	Localization and calling	133
4.1.6	Handover	137
4.1.7	Security	140
4.1.8	New data services	142
<b>4.2</b>	DECT	150
4.2.1	System architecture	151
4.2.2	Protocol architecture	152
<b>4.3</b>	TETRA	154
<b>4.4</b>	UMTS and IMT-2000	156
4.4.1	UMTS releases and standardization	161
4.4.2	UMTS system architecture	162
4.4.3	UMTS radio interface	163
4.4.4	UTRAN	169
4.4.5	Core network	171
4.4.6	Handover	174
<b>4.5</b>	Summary	176
<b>4.6</b>	Review exercises	178
<b>4.7</b>	References	180

## **5 Satellite systems**

<b>5.1</b>	History	185
<b>5.2</b>	Applications	186
<b>5.3</b>	Basics	189
5.3.1	GEO	193
5.3.2	LEO	194
5.3.3	MEO	195

5.4	Routing	
5.5	Localization	195
5.6	Handover	196
5.7	Examples	196
5.8	Summary	197
5.9	Review exercises	199
5.10	References	200
		201
<b>6</b>	<b>Broadcast systems</b>	<b>203</b>
6.1	Overview	
6.2	Cyclical repetition of data	203
6.3	Digital audio broadcasting	205
6.3.1	Multi-media object transfer protocol	206
6.4	Digital video broadcasting	
6.4.1	DVB data broadcasting	211
6.4.2	DVB for high-speed internet access	214
6.5	Convergence of broadcasting and mobile communications	215
6.6	Summary	216
6.7	Review exercises	218
6.8	References	218
<b>7</b>	<b>Wireless LAN</b>	<b>221</b>
7.1	Infra red vs radio transmission	224
7.2	Infrastructure and ad-hoc network	225
7.3	IEEE 802.11	227
7.3.1	System architecture	228
7.3.2	Protocol architecture	230
7.3.3	Physical layer	231
7.3.4	medium access control layer	234
7.3.5	MAC management	245
7.3.6	802.11b	251
7.3.7	802.11a	254
7.3.8	Newer developments	258
7.4	HIPERLAN	259
7.4.1	Historical: HIPERLAN 1	260
7.4.2	WATM	264
7.4.3	BRAN	275
7.4.4	HiperLAN2	277
7.5	Bluetooth	289
7.5.1	User scenarios	290
7.5.2	Architecture	291

7.5.3	Radio layer 296	
7.5.4	Baseband layer 296	
7.5.5	Link manager protocol 302	
7.5.6	L2CAP 305	
7.5.7	Security 307	
7.5.8	SDP 309	
7.5.9	Profiles 310	
7.5.10	IEEE 802.15 311	
<b>7.6</b>	Summary	
<b>7.7</b>	Review exercises	313
<b>7.8</b>	References	317
		318
<b>8</b>	<b>Mobile network layer</b>	<b>323</b>
<b>8.1</b>	Mobile IP	324
8.1.1	Goals, assumptions and requirements 324	
8.1.2	Entities and terminology 327	
8.1.3	IP packet delivery 329	
8.1.4	Agent discovery 330	
8.1.5	Registration 332	
8.1.6	Tunneling and encapsulation 335	
8.1.7	Optimizations 339	
8.1.8	Reverse tunneling 341	
8.1.9	IPv6 343	
8.1.10	IP micro-mobility support 344	
<b>8.2</b>	Dynamic host configuration protocol	348
<b>8.3</b>	Mobile ad-hoc networks	350
8.3.1	Routing 352	
8.3.2	Destination sequence distance vector 355	
8.3.3	Dynamic source routing 356	
8.3.4	Alternative metrics 359	
8.3.5	Overview ad-hoc routing protocols 360	
<b>8.4</b>	Summary	363
<b>8.5</b>	Review exercises	365
<b>8.6</b>	References	366
<b>9</b>	<b>Mobile transport layer</b>	<b>371</b>
<b>9.1</b>	Traditional TCP	372
9.1.1	Congestion control 372	
9.1.2	Slow start 372	

## Mobile communications

9.1.3	Fast retransmit/fast recovery	373
9.1.4	Implications of mobility	374
9.2	Classical TCP improvements	375
9.2.1	Indirect TCP	375
9.2.2	Snooping TCP	378
9.2.3	Mobile TCP	380
9.2.4	Fast retransmit/fast recovery	382
9.2.5	Transmission/time-out freezing	383
9.2.6	Selective retransmission	383
9.2.7	Transaction-oriented TCP	384
9.3	TCP over 2.5/3G wireless networks	386
9.4	Performance enhancing proxies	388
9.5	Summary	389
9.6	Review exercises	391
9.7	References	392

## 10 Support for mobility 395

10.1	File systems	396
10.1.1	Consistency	397
10.1.2	Coda	398
10.1.3	Little work	400
10.1.4	Ficus	400
10.1.5	Mile-NFS	401
10.1.6	Rover	401
10.2	World wide web	401
10.2.1	Hypertext transfer protocol	402
10.2.2	Hypertext markup language	405
10.2.3	Some approaches that might help wireless access	406
10.2.4	System architecture	409
10.4	Wireless application protocol (version 1.x)	412
10.3.1	Architecture	413
10.3.2	Wireless datagram protocol	416
10.3.3	Wireless transport layer security	417
10.3.4	Wireless transaction protocol	420
10.3.5	Wireless session protocol	424
10.3.6	Wireless application environment	432
10.3.7	Wireless markup language	434
10.3.8	WMLScript	436

## Contents

10.3.9	Wireless telephony application	439
10.3.10	Push architecture	446
10.3.11	Push/pull services	448
10.3.12	Example stacks with WAP 1.x	449
<b>10.4</b>	i-mode	450
<b>10.5</b>	SyncML	453
<b>10.6</b>	WAP 2.0	454
<b>10.7</b>	Summary	457
<b>10.8</b>	Review exercises	460
<b>10.9</b>	References	461
<b>11</b>	<b>Outlook</b>	<b>469</b>
<b>11.1</b>	The architecture of future networks	469
<b>11.2</b>	References	473
		475
Appendix 1 – Acronyms		491
Appendix 2 – Glossary		497
Index		

## About the author

Jochen Schiller is head of the working group Computer Systems & Telematics at the Institute of Computer Science, FU Berlin, Germany. He received his MSc and PhD degrees in Computer Science from the University of Karlsruhe, Germany, in 1993 and 1996, respectively. As a postdoc he joined Uppsala University, Sweden, and worked in several industry co-operations and European projects. Since 2001 he has been a full professor at FU Berlin. The focus of his research is on mobile and wireless communications, communication architectures and operating systems for embedded devices, and quality of service aspects in communication systems. He is a member of IEEE and GI and acts as consultant for several companies in the networking and communication business.
