

INTERNATIONAL EDITION

# Computer Networks and Internets

with Internet Applications

Third Edition

Douglas E. Comer

## Preface

## Chapter 1 Introduction

1.1	<i>Growth Of Computer Networking</i>	1
1.2	<i>Complexity In Network Systems</i>	2
1.3	<i>Mastering The Complexity</i>	2
1.4	<i>Concepts And Terminology</i>	3
1.5	<i>Organization Of The Text</i>	3
1.6	<i>Summary</i>	4

## Chapter 2 Motivation And Tools

2.1	<i>Introduction</i>	7
2.2	<i>Resource Sharing</i>	7
2.3	<i>Growth Of The Internet</i>	8
2.4	<i>Probing The Internet</i>	11
2.5	<i>Interpreting A Ping Response</i>	12
2.6	<i>Tracing A Route</i>	14
2.7	<i>Summary</i>	15

## Chapter 3 Network Programming And Applications

3.1	<i>Introduction</i>	17
3.2	<i>Network Communication</i>	18
3.3	<i>Client-Server Computing</i>	18
3.4	<i>Communication Paradigm</i>	19
3.5	<i>An Example Application Program Interface</i>	19
3.6	<i>An Intuitive Look At The API</i>	20
3.7	<i>Definition Of The API</i>	20
3.8	<i>Code For , Echo Application</i>	23
3.9	<i>Code For A Chat Application</i>	29
3.10	<i>Code For A Web Application</i>	33
3.11	<i>Summary</i>	41

# **PART I Data Transmission**

## **Chapter 4 Transmission Media**

4.1	Introduction	45
4.2	Copper Wires	45
4.3	Glass Fibers	47
4.4	Radio	48
4.5	Satellites	48
4.6	Geosynchronous Satellites	49
4.7	Low Earth Orbit Satellites	50
4.8	Low Earth Orbit Satellite Arrays	50
4.9	Microwave	51
4.10	Infrared	51
4.11	Light From A Laser	52
4.12	Summary	52

## **Chapter 5 Local Asynchronous Communication (RS-232)**

55

5.1	Introduction	55
5.2	The Need For Asynchronous Communication	56
5.3	Using Electric Current To Send Bits	56
5.4	Standards For Communication	57
5.5	Baud Rate, Framing, And Errors	59
5.6	Full Duplex Asynchronous Communication	60
5.7	Limitations Of Real Hardware	61
5.8	Hardware Bandwidth And The Transmission Of Bits	62
5.9	The Effect Of Noise On Communication	62
5.10	Significance For Data Networking	63
5.11	Summary	64

## **Chapter 6 Long-Distance Communication (Carriers, Modulation, And Modems)**

67

6.1	Introduction	67
6.2	Sending Signals Across Long Distances	67
6.3	Modem Hardware Used For Modulation And Demodulation	70
6.4	Leased Analog Data Circuits	71
6.5	Optical, Radio Frequency, And Dialup Modems	72

6.7	Baseband And Broadband Technologies	72
6.8	Wave Division Multiplexing	75
6.9	Spread Spectrum	76
6.10	Time Division Multiplexing	76
6.11	Summary	77

## PART II Packet Transmission

### Chapter 7 Packets, Frames, And Error Detection

81

7.1	Introduction	81
7.2	The Concept Of Packets	81
7.3	Packets And Time-Division Multiplexing	83
7.4	Packets And Hardware Frames	84
7.5	Byte Stuffing	85
7.6	Transmission Errors	87
7.7	Parity Bits And Parity Checking	87
7.8	Probability, Mathematics, And Error Detection	88
7.9	Detecting Errors With Checksums	89
7.10	Detecting Errors With Cyclic Redundancy Checks	90
7.11	Combining Building Blocks	92
7.12	Burst Errors	93
7.13	Frame Format And Error Detection Mechanisms	93
7.14	Summary	94

### Chapter 8 LAN Technologies And Network Topology

99

8.1	Introduction	99
8.2	Direct Point-to-Point Communication	100
8.3	Shared Communication Channels	102
8.4	Significance Of LANs And Locality Of Reference	102
8.5	LAN Topologies	103
8.6	Example Bus Network: Ethernet	106
8.7	Carrier Sense On Multi-Access Networks (CSMA)	108
8.8	Collision Detection And Backoff With CSMA/CD	108
8.9	802.11 Wireless LANs And CSMA/CA	110
8.10	Another Example Bus Network: LocalTalk	111
8.11	Example Ring Network: IBM Token Ring	112
8.12	Another Example Ring Network: FDDI	114
8.13	Example Star Network: ATM	115
8.14	Summary	117

## Chapter 9 Hardware Addressing And Frame Type Identification

121

- 9.1 Introduction 121
- 9.2 Specifying A Recipient 122
- 9.3 How LAN Hardware Uses Addresses To Filter Packets 122
- 9.4 Format Of A Physical Address 124
- 9.5 Broadcasting 125
- 9.6 Multicasting 126
- 9.7 Multicast Addressing 127
- 9.8 Identifying Packet Contents 128
- 9.9 Frame Headers And Frame Format 128
- 9.10 An Example Frame Format 129
- 9.11 Using Networks That Do Not Have Self-Identifying Frames 131
- 9.12 Network Analyzers, Physical Addresses, Frame Types 133
- 9.13 Summary 134
- 9.14 Ethernet Address Assignment 136

## Chapter 10 LAN Wiring, Physical Topology, And Interface Hardware 139

- 10.1 Introduction 139
- 10.2 Speeds Of LANs And Computers 139
- 10.3 Network Interface Hardware 140
- 10.4 The Connection Between A NIC And A Network 142
- 10.5 Original Thick Ethernet Wiring 142
- 10.6 Connection Multiplexing 144
- 10.7 Thin Ethernet Wiring 145
- 10.8 Twisted Pair Ethernet 146
- 10.9 Advantages And Disadvantages Of Wiring Schemes 148
- 10.10 The Topology Paradox 150
- 10.11 Network Interface Cards And Wiring Schemes 150
- 10.12 Wiring Schemes And Other Network Technologies 152
- 10.13 Summary 153

## Chapter 11 Extending LANs: Fiber Modems, Repeaters, Bridges, and Switches 155

- 11.1 Introduction 155
- 11.2 Distance Limitation And LAN Design 155
- 11.3 Fiber Optic Extensions 156
- 11.4 Repeaters 157
- 11.5 Bridges 160
- 11.6 Frame Filtering 161

11.7	Startup And Steady State Behavior Of Bridged Networks	162
11.8	Planning A Bridged Network	162
11.9	Bridging Between Buildings	163
11.10	Bridging Across Longer Distances	164
11.11	A Cycle Of Bridges	166
11.12	Distributed Spanning Tree	167
11.13	Switching	168
11.14	Combining Switches And Hubs	169
11.15	Bridging And Switching With Other Technologies	169
11.16	Summary	170

## Chapter 12 Long-Distance Digital Connection Technologies

173

12.1	Introduction	173
12.2	Digital Telephony	173
12.3	Synchronous Communication	175
12.4	Digital Circuits And DSU/CSUs	176
12.5	Telephone Standards	177
12.6	DS Terminology And Data Rates	178
12.7	Lower Capacity Circuits	179
12.8	Intermediate Capacity Digital Circuits	179
12.9	Highest Capacity Circuits	180
12.10	Optical Carrier Standards	181
12.11	The C Suffix	181
12.12	Synchronous Optical NETWORK (SONET)	181
12.13	The Local Subscriber Loop	183
12.14	ISDN	183
12.15	Asymmetric Digital Subscriber Line Technology	184
12.16	Other DSL Technologies	187
12.17	Cable Modem Technology	188
12.18	Upstream Communication	189
12.19	Hybrid Fiber Coax	190
12.20	Fiber To The Curb	191
12.21	Alternatives For Special Cases	191
12.22	Broadcast Satellite Systems	192
12.23	Summary	193

## Chapter 13 WAN Technologies And Routing

197

13.1	Introduction	197
13.2	Large Networks And Wide Areas	197
13.3	Packet Switches	198

13.4	Forming A WAN	199
13.5	Store And Forward	200
13.6	Physical Addressing In A WAN	201
13.7	Next-Hop Forwarding	201
13.8	Source Independence	203
13.9	Relationship Of Hierarchical Addresses To Routing	203
13.10	Routing In A WAN	204
13.11	Use Of Default Routes	206
13.12	Routing Table Computation	207
13.13	Shortest Path Computation In A Graph	207
13.14	Distributed Route Computation	209
13.15	Distance Vector Routing	209
13.16	Link-State Routing (SPF)	212
13.17	Example WAN Technologies	212
13.18	Summary	214

## Chapter 14 Connection-Oriented Networking And ATM

14.1	Introduction	217
14.2	A Single, Global Network	217
14.3	ISDN And ATM	218
14.4	ATM Design And Cells	218
14.5	Connection-Oriented Service	220
14.6	VPI/VCI	220
14.7	Labels And Label Switching	221
14.8	An Example Trip Through An ATM Network	222
14.9	Permanent Virtual Circuits	223
14.10	Switched Virtual Circuits	224
14.11	Quality Of Service	225
14.12	The Motivation For Cells And Label Switching	225
14.13	ATM Data Transmission And AAL5	226
14.14	Critique Of ATM	227
14.15	Summary	228

## Chapter 15 Network Characteristics: Ownership, Service Paradigm, And Performance

15.1	Introduction	231
15.2	Network Ownership	232
15.3	Privacy And Public Networks	233
15.4	Advantages And Disadvantages	233
15.5	Virtual Private Networks	234

15.6	Guaranteeing Absolute Privacy	235
15.7	Service Paradigm	235
15.8	Connection-Oriented Service Paradigm	236
15.9	Connectionless Service Paradigm	237
15.10	Interior And Exterior Service Paradigms	237
15.11	Comparison Of Service Paradigms	238
15.12	Examples Of Service Paradigms	238
15.13	Addresses And Connection Identifiers	239
15.14	Network Performance Characteristics	240
15.15	Jitter	244
15.16	Summary	244

## Chapter 16 Protocols And Layering

247

16.1	Introduction	247
16.2	The Need For Protocols	247
16.3	Protocol Suites	248
16.4	A Plan For Protocol Design	249
16.5	The Seven Layers	249
16.6	Stacks: Layered Software	251
16.7	How Layered Software Works	253
16.8	Multiple, Nested Headers	254
16.9	The Scientific Basis For Layering	254
16.10	Techniques Protocols Use	255
16.11	The Art Of Protocol Design	264
16.12	Summary	264

## PART III Internetworking

### Chapter 17 Internetworking: Concepts, Architecture, and Protocols 269

17.1	Introduction	269
17.2	The Motivation For Internetworking	269
17.3	The Concept Of Universal Service	270
17.4	Universal Service In A Heterogeneous World	270
17.5	Internetworking	271
17.6	Physical Network Connection With Routers	271
17.7	Internet Architecture	272
17.8	Achieving Universal Service	273
17.9	A Virtual Network	273
17.10	Protocols For Internetworking	275

17.11	Significance Of Internetworking And TCP/IP	275
17.12	Layering And TCP/IP Protocols	276
17.13	Host Computers, Routers, And Protocol Layers	277
17.14	Summary	278

## Chapter 18 IP: Internet Protocol Addresses

18.1	Introduction	281
18.2	Addresses For The Virtual Internet	281
18.3	The IP Addressing Scheme	282
18.4	The IP Address Hierarchy	283
18.5	Original Classes Of IP Addresses	283
18.6	Computing The Class Of An Address	285
18.7	Dotted Decimal Notation	286
18.8	Classes And Dotted Decimal Notation	287
18.9	Division Of The Address Space	287
18.10	Authority For Addresses	288
18.11	A Classful Addressing Example	288
18.12	Subnet And Classless Addressing	289
18.13	Address Masks	290
18.14	CIDR Notation	291
18.15	A CIDR Address Block Example	291
18.16	CIDR Host Addresses	292
18.17	Special IP Addresses	293
18.18	Summary Of Special IP Addresses	294
18.19	The Berkeley Broadcast Address Form	295
18.20	Routers And The IP Addressing Principle	295
18.21	Multi-Homed Hosts	297
18.22	Summary	297

## Chapter 19 Binding Protocol Addresses (ARP)

19.1	Introduction	301
19.2	Protocol Addresses And Packet Delivery	302
19.3	Address Resolution	302
19.4	Address Resolution Techniques	303
19.5	Address Resolution With Table Lookup	304
19.6	Address Resolution With Closed-Form Computation	305
19.7	Address Resolution With Message Exchange	306
19.8	Address Resolution Protocol	307
19.9	ARP Message Delivery	308
19.10	ARP Message Format	309

## Contents

19.11	<i>Sending An ARP Message</i>	310
19.12	<i>Identifying ARP Frames</i>	311
19.13	<i>Caching ARP Responses</i>	311
19.14	<i>Processing An Incoming ARP Message</i>	312
19.15	<i>Layering, Address Resolution, Protocol Addresses</i>	313
19.16	<i>Summary</i>	314

## Chapter 20 IP Datagrams And Datagram Forwarding

317

20.1	<i>Introduction</i>	317
20.2	<i>Connectionless Service</i>	317
20.3	<i>Virtual Packets</i>	318
20.4	<i>The IP Datagram</i>	319
20.5	<i>Forwarding An IP Datagram</i>	320
20.6	<i>IP Addresses And Routing Table Entries</i>	321
20.7	<i>The Mask Field And Datagram Forwarding</i>	322
20.8	<i>Destination And Next-Hop Addresses</i>	322
20.9	<i>Best-Effort Delivery</i>	323
20.10	<i>The IP Datagram Header Format</i>	324
20.11	<i>Summary</i>	325

19.11	<i>Sending An ARP Message</i>	310
19.12	<i>Identifying ARP Frames</i>	311
19.13	<i>Caching ARP Responses</i>	311
19.14	<i>Processing An Incoming ARP Message</i>	312
19.15	<i>Layering, Address Resolution, Protocol Addresses</i>	313
19.16	<i>Summary</i>	314

## Chapter 20 IP Datagrams And Datagram Forwarding

317

20.1	<i>Introduction</i>	317
20.2	<i>Connectionless Service</i>	317
20.3	<i>Virtual Packets</i>	318
20.4	<i>The IP Datagram</i>	319
20.5	<i>Forwarding An IP Datagram</i>	320
20.6	<i>IP Addresses And Routing Table Entries</i>	321
20.7	<i>The Mask Field And Datagram Forwarding</i>	322
20.8	<i>Destination And Next-Hop Addresses</i>	322
20.9	<i>Best-Effort Delivery</i>	323
20.10	<i>The IP Datagram Header Format</i>	324
20.11	<i>Summary</i>	325

## Chapter 21 IP Encapsulation, Fragmentation, And Reassembly

329

21.1	<i>Introduction</i>	329
21.2	<i>Datagram Transmission And Frames</i>	329
21.3	<i>Encapsulation</i>	330
21.4	<i>Transmission Across An Internet</i>	331
21.5	<i>MTU, Datagram Size, And Encapsulation</i>	332
21.6	<i>Reassembly</i>	334
21.7	<i>Identifying A Datagram</i>	334
21.8	<i>Fragment Loss</i>	335
21.9	<i>Fragmenting A Fragment</i>	335
21.10	<i>Summary</i>	336

## Chapter 22 The Future IP (IPv6)

22.1	<i>Introduction</i>	339
22.2	<i>The Success Of IP</i>	339
22.3	<i>The Motivation For Change</i>	340
22.4	<i>A Name And A Version Number</i>	341
22.5	<i>IPv6 Features</i>	341

22.6	<i>IPv6 Datagram Format</i>	342
22.7	<i>IPv6 Base Header Format</i>	342
22.8	<i>How IPv6 Handles Multiple Headers</i>	344
22.9	<i>Fragmentation, Reassembly, And Path MTU</i>	345
22.10	<i>The Purpose Of Multiple Headers</i>	346
22.11	<i>IPv6 Addressing</i>	347
22.12	<i>IPv6 Colon Hexadecimal Notation</i>	348
22.13	<i>Summary</i>	349

## **Chapter 23 An Error Reporting Mechanism (ICMP)**

23.1	<i>Introduction</i>	351
23.2	<i>Best-Effort Semantics And Error Detection</i>	351
23.3	<i>Internet Control Message Protocol</i>	352
23.4	<i>ICMP Message Transport</i>	355
23.5	<i>Using ICMP Messages To Test Reachability</i>	356
23.6	<i>Using ICMP To Trace A Route</i>	356
23.7	<i>The Last Address Printed By Traceroute</i>	357
23.8	<i>Using ICMP For Path MTU Discovery</i>	358
23.9	<i>Summary</i>	359

## **Chapter 24 TCP: Reliable Transport Service**

24.1	<i>Introduction</i>	361
24.2	<i>The Need For Reliable Transport</i>	361
24.3	<i>The Transmission Control Protocol</i>	362
24.4	<i>The Service TCP Provides To Applications</i>	362
24.5	<i>End-To-End Service And Datagrams</i>	363
24.6	<i>Achieving Reliability</i>	364
24.7	<i>Packet Loss And Retransmission</i>	365
24.8	<i>Adaptive Retransmission</i>	366
24.9	<i>Comparison Of Retransmission Times</i>	367
24.10	<i>Buffers, Flow Control, And Windows</i>	367
24.11	<i>Three-Way Handshake</i>	369
24.12	<i>Congestion Control</i>	370
24.13	<i>TCP Segment Format</i>	370
24.14	<i>Summary</i>	371

25.1	Introduction	375
25.2	Static Vs. Dynamic Routing	375
25.3	Static Routing In Hosts And A Default Route	376
25.4	Dynamic Routing And Routers	377
25.5	Routing In The Global Internet	378
25.6	Autonomous System Concept	379
25.7	The Two Types Of Internet Routing Protocols	380
25.8	Routes And Data Traffic	382
25.9	The Border Gateway Protocol (BGP)	382
25.10	The Routing Information Protocol (RIP)	384
25.11	RIP Packet Format	385
25.12	The Open Shortest Path First Protocol (OSPF)	386
25.13	An Example OSPF Graph	387
25.14	OSPF Areas	388
25.15	Multicast Routing	388
25.16	Summary	392

## PART IV Network Applications

### Chapter 26 Client-Server Interaction

26.1	Introduction	397
26.2	The Functionality Application Software Provides	398
26.3	The Functionality An Internet Provides	398
26.4	Making Contact	399
26.5	The Client-Server Paradigm	399
26.6	Characteristics Of Clients And Servers	400
26.7	Server Programs And Server-Class Computers	400
26.8	Requests, Responses, And Direction Of Data Flow	401
26.9	Transport Protocols and Client-Server Interaction	401
26.10	Multiple Services On One Computer	402
26.11	Identifying A Particular Service	403
26.12	Multiple Copies Of A Server For A Single Service	403
26.13	Dynamic Server Creation	404
26.14	Transport Protocols And Unambiguous Communication	404
26.15	Connection-Oriented And Connectionless Transport	405
26.16	A Service Reachable Through Multiple Protocols	406
26.17	Complex Client-Server Interactions	406
26.18	Interactions And Circular Dependencies	407
26.19	Summary	407

29.10	<i>Resolving A Name</i>	447
29.11	<i>Optimization Of DNS Performance</i>	449
29.12	<i>Types Of DNS Entries</i>	450
29.13	<i>Aliases Using The CNAME Type</i>	450
29.14	<i>An Important Consequence Of Multiple Types</i>	451
29.15	<i>Abbreviations And The DNS</i>	451
29.16	<i>Summary</i>	452

## Chapter 30 Electronic Mail Representation And Transfer

30.1	<i>Introduction</i>	455
30.2	<i>The Electronic Mail Paradigm</i>	455
30.3	<i>Electronic Mailboxes And Addresses</i>	456
30.4	<i>Electronic Mail Message Format</i>	457
30.5	<i>Carbon Copies</i>	459
30.6	<i>Multipurpose Internet Mail Extensions</i>	459
30.7	<i>E-mail And Application Programs</i>	461
30.8	<i>Mail Transfer</i>	461
30.9	<i>The Simple Mail Transfer Protocol</i>	462
30.10	<i>Optimizing For Multiple Recipients On A Computer</i>	462
30.11	<i>Mail Exploders, Lists, And Forwarders</i>	462
30.12	<i>Mail Gateways</i>	463
30.13	<i>Automated Mailing Lists</i>	464
30.14	<i>Mail Relays And E-mail Addresses</i>	465
30.15	<i>Mailbox Access</i>	466
30.16	<i>Dialup Connections And POP</i>	468
30.17	<i>Summary</i>	468

## Chapter 31 File Transfer And Remote File Access

31.1	<i>Introduction</i>	471
31.2	<i>Data Transfer And Distributed Computation</i>	471
31.3	<i>Saving Intermediate Results</i>	472
31.4	<i>Generalized File Transfer</i>	472
31.5	<i>Interactive And Batch Transfer Paradigms</i>	473
31.6	<i>The File Transfer Protocol</i>	474
31.7	<i>FTP General Model And User Interface</i>	474
31.8	<i>FTP Commands</i>	475
31.9	<i>Connections, Authentication, And File Permissions</i>	476

31.11	File Transfer In Either Direction	477
31.12	Wildcard Expansion In File Names	478
31.13	File Name Translation	478
31.14	Changing Directories And Listing Contents	478
31.15	File Types And Transfer Modes	479
31.16	Example Of Using FTP	480
31.17	Verbose Output	482
31.18	Client-Server Interaction In FTP	482
31.19	Control And Data Connections	483
31.20	Data Connections And End Of File	484
31.21	Trivial File Transfer Protocol	484
31.22	Network File System	485
31.23	Summary	486

## Chapter 32 World Wide Web Pages And Browsing

490

32.1	Introduction	489
32.2	Browser Interface	489
32.3	Hypertext And Hypermedia	490
32.4	Document Representation	490
32.5	HTML Format And Representation	491
32.6	Example HTML Formatting Tags	493
32.7	Headings	493
32.8	Lists	494
32.9	Embedding Graphics Images In A Web Page	494
32.10	Identifying A Page	495
32.11	Hypertext Links From One Document To Another	496
32.12	Client-Server Interaction	497
32.13	Web Document Transfer And HTTP	498
32.14	Browser Architecture	499
32.15	Optional Clients	500
32.16	Caching In Web Browsers	501
32.17	HTTP Support For Caching	502
32.18	Alternative Transfer Protocols	503
32.19	Other Markup Languages	503
32.20	Summary	504

## Chapter 33 Dynamic Web Document Technologies (CGI, ASP, JSP, PHP, ColdFusion)

508

33.1	Introduction	508
------	--------------	-----

33.2	Three Basic Types of Web D...	
------	-------------------------------	--

33.3	Advantages And Disadvantages Of Each Document Type	510
33.4	Implementation Of Dynamic Documents	512
33.5	The CGI Standard	513
33.6	Output From A CGI Program	513
33.7	An Example CGI Program	514
33.8	Parameters And Environment Variables	516
33.9	State Information And Cookies	517
33.10	A CGI Script With Long-Term State Information	517
33.11	A CGI Script With Short-Term State Information	519
33.12	Forms And Interaction	522
33.13	Server-Side Scripting Technologies	523
33.14	Summary	524

## Chapter 34 Technology For Active Web Documents (Java, JavaScript)

34.1	Introduction	527
34.2	An Early Form Of Continuous Update	528
34.3	Active Documents And Server Overhead	529
34.4	Active Document Representation And Translation	529
34.5	Java Technology	531
34.6	The Java Programming Language	531
34.7	The Java Run-Time Environment	533
34.8	The Java Library	534
34.9	A Graphics Toolkit	535
34.10	Using Java Graphics On A Particular Computer	536
34.11	Java Interpreters And Browsers	537
34.12	Compiling A Java Program	537
34.13	An Example Applet	538
34.14	Invoking An Applet	540
34.15	Example Of Interaction With A Browser	541
34.16	Errors And Exception Handling	543
34.17	JavaScript Technology	543
34.18	Alternatives	545
34.19	Summary	546

## Chapter 35 RPC and Middleware

35.1	Introduction	549
35.2	Programming Clients And Servers	549
35.3	Remote Procedure Call Paradigm	550
35.4	RPC Paradigm	552

25.5	Summary	551
25.6	Extending Your Requirements	552
25.7	Appendixes And Other Elements	556
25.8	Summary	558

## Chapter 36 Network Management (SNMP)

561

36.1	Introduction	561
36.2	Managing An Internet	561
36.3	The Danger Of Hidden Failures	562
36.4	Network Management Software	563
36.5	Clients, Servers, Managers, And Agents	563
36.6	Simple Network Management Protocol	564
36.7	Fetch-Store Paradigm	564
36.8	The MIB And Object Names	565
36.9	The Variety Of MIB Variables	566
36.10	MIB Variables That Correspond To Arrays	566
36.11	Summary	567

## Chapter 37 Network Security

569

37.1	Introduction	569
37.2	Secure Networks And Policies	569
37.3	Aspects Of Security	570
37.4	Responsibility And Control	571
37.5	Integrity Mechanisms	571
37.6	Access Control And Passwords	572
37.7	Encryption And Confidentiality	572
37.8	Public Key Encryption	573
37.9	Authentication With Digital Signatures	573
37.10	Internet Firewall Concept	574
37.11	Packet Filtering	576
37.12	Using Packet Filters To Create A Firewall	577
37.13	Virtual Private Networks	578
37.14	Tunneling	579
37.15	Summary	580

## Chapter 38 Initialization (Configuration)

5

38.1	Introduction	583
38.2	Bootstrapping	583

## Contents

18.1	Starting Protocol Software	584
18.2	Protocol Parameters	584
18.3	Protocol Configuration	585
18.4	Examples Of Items That Need To Be Configured	585
18.5	Example Configuration: Using A Disk File	586
18.6	The Need For Automatic Protocol Configuration	587
18.7	Methods For Automatic Protocol Configuration	587
18.8	The Address Used To Find An Address	588
18.9	A Sequence Of Protocols Used During Bootstrapping	589
18.10	Bootstrapping Protocol (BOOTP)	589
18.11	Automatic Address Assignment	591
18.12	Dynamic Host Configuration Protocol (DHCP)	591
18.13	Optimizations In DHCP	593
18.14	DHCP Message Format	593
18.15	DHCP And Domain Names	594
18.16	Summary	595
Appendix 1 Glossary Of Networking Terms And Abbreviations		597
Appendix 2 The ASCII Character Set		637
Appendix 3 Address Masks In Dotted Decimal		639
Appendix 4 How To Use The CD-ROM Included With This Book		641
Appendix 5 Building A Network At Home With NAT		647
Appendix 6 The Undergrad Networking Lab At Purdue		653
Bibliography		659
Index		667
