PREFACE

xiii

PART I: IDEAS AND CONCEPTS

Chapter 1 INTRODUCTORY BACKGROUND

Kinds of operating system	3
Is UNIX friendly?	4
Kinds of terminal	4
A sample	5
Commands and programs	5
Document preparation	7
On-line documentation	8
The C programming language	9
History	9
Small-is-beautiful	10

Chapter 2 SHARING YOUR COMPUTER

Learning how operating systems work	11
How does a computer support several simultaneous users?	12
Security and the superuser	13
Logging in	15
Finding another user's password	15
Protection between processes	16
Protecting files	16
Accounting	17
Electronic mail	17

Chapter 3 FILES

Binary and character files	19
Physical devices	20
Permanent and removable file systems	22
	23

Sharing and protecting files	23
Managing a lot of files	24
Requirements of a file system	24
Chapter 4 FILE STRUCTURE	25
Directories	26
A personal telephone directory	26
Organizing UNIX directories	27
Advantages of directories	28
Being a pioneer	29
Tree structure	29
The overall tree	30
Removable files	31
Introduction to protection	32
Owners and groups	32
Permissions	33
The Great Pest	34
Examples of protection	35
Protection for directories	35
Protection from yourself	35
Running out of file storage	36
Chapter 5 INPUT AND THE SHELL	37
Keyboards	38
Networks	38
Typing	38
Scrolling	39
Full-duplex and type-ahead	40
Terminal characteristics	41
The shell	41
Device-independence	41
Spooling	42
Pipes	43
Software tools	45
Summary	45

PART II: APPLYING THE IDEAS

Chapter 6 A SAMPLE SESSION	49
A revelation	51
Format of commands	52
Options	54
Exploring the tree	56
Relation of options to other arguments	56
Changing permissions	57
Making a directory	58

Pathnames	60
Moving files	61
Copying files	61
Deleting files	62
Linking	64
Simultaneous writing	65
Combating the Great Pest	65

Chapter 7 COMMANDS AND THE SHELL

Style	67
Options	68
Extra arguments	69
Summary of style	70
Notation for specifying syntax	71
Different shells	72
Wildcards	73
More advice on filenames	73
Extensions	75
README files	77
Summary of advice	77
The echo command	78
Redirection	78
Chickens	79
Pipes	80
Exploiting pipes	81
Executing commands in the background	81
Use of a printer	83
Defining your own commands	83
Executing shell commands	84
Making files executable	85
Redirection on shell programs	86
Bin directories	86
A sortie against Dudley	88
The shell programming language	88
User profiles	89
Summary of the shell	90

Chapter 8 EDITING

A note for BASIC users	91
The ed editor	92
The buffer	93
A sample session	93
Some changes	94
The general form of a command	96
Writing to a file	99
Changes within the current line	100
Quitting	101
Browsing and breaking	103

Complete examples	104
Regular expressions	107
Examples of regular expressions	108
Context of editing metacharacters and wildcards	110
Use of ampersand in a replacement	110
Repeated edits	111
Regular expressions in the grep command	112
Including other files	112
Looking at the outside world	112
Further editing facilities	113
Reference examples	113
Screen editing	115
 Chapter 9 DOCUMENTATION AND COMMUNICATION	 117
UNIX documentation	118
Extracting information from the manual	120
Redirecting output	120
Format of manual pages	120
Other forms of help	121
Subsidiary help systems	122
Critique	122
Computer-aided instruction	123
Mail	123
Finding the current users	123
Being inquisitive	124
Communicating	124
Sending mail	126
Receiving mail	127
Controlling mail	128
Accessing remote machines	129
Summary of communication mechanisms	129
 Chapter 10 ERRORS	 131
Up and down	132
Initial problems	132
Hung terminals	133
The insatiable appetite	133
The inescapable program	133
The screenful of garbage	134
Error messages	134
Errors with files	135
Executing commands	137
Misuse of spaces in shell commands	137
Unintended wildcards	138
Some specific messages	138
Mean tricks	139

Chapter 11 DOCUMENT PREPARATION

Text formatters	141
Facilities available	142
Some advice	143
Method of use	144
Output on a terminal	145
Preparing input	145
Comments	145
Page and line breaks	147
Macros	147
Paragraphs and sections	148
Arguments	149
Indented paragraphs	150
Displays	150
Preprocessors	151
Fonts	153
Use of backslash	153
Forbidden characters	154
Errors	155
House style	155
Spacing and punctuation	156
Raw text	156
Page size and spacing	158
Environments	158
The start of a document	160
Macro libraries	161
Manual pages	162
Dangerous combinations	163
Typesetting	163
Independence of printing devices	164
Summary of formatting	164
List of requests	165
Aids to good writing	165
Readability grades	166
Sentence information	166
Word usage	168
Sentence openers	168
Summary of style	168
Diction	168
Reaction	169
Summary of all aids	169
	170
Chapter 12 PROGRAMMING	
Programming languages	171
Design of programming languages	172
Comparing programs	172
General impressions	173
Details of the C program	174
	175

In C you can ...	176
System calls	177
Executing a program	177
The executable program	178
Keeping an executable program	179
Compiling separate modules	179
Extensions	180
Compiling a multi-module program	181
Languages and processors	182
Libraries	182
Following the UNIX style	183
Summary	183
 Chapter 13 ROUNDING OFF	 185
Devices	186
Performing commands in the future	187
Comparing files	188
File usage	190
Changing your password	190
Seven Deadly Sins	191
Paginated printing	191
Controlling your terminal	192
Games	193
Looking at the end of a file	193
Counting	193
Versions of UNIX	194
Summary	195
 REFERENCES	 196
 APPENDICES	 197
Appendix A: sample terminal sessions	197
Appendix B: list of commands	205
 INDEX	 215
