CONTENTS

Preface

1 Mathematical Logic

xiii

Introduction

1

1-1 Statements and Notation

1

1-2 Connectives

2

1-2.1 Negation

7

1-2.2 Conjunction

8

1-2.3 Disjunction

9

1-2.4 Statement Formulas and Truth Tables

10

Exercises 1-2.4

11

1-2.5 Logical Capabilities of Programming Languages

14

1-2.6 Conditional and Biconditional

14

Exercises 1-2.6

18

1-2.7 Well-formed Formulas

22

1-2.8 Tautologies

23

Exercises 1-2.8

24

1-2.9 Equivalence of Formulas

26

1-2.10 Duality Law

26

1-2.11 Tautological Implications

30

32

Exercises 1-2.11	34
1-2.12 Formulas with Distinct Truth Tables	35
1-2.13 Functionally Complete Sets of Connectives	37
Exercises 1-2.13	38
1-2.14 Other Connectives	39
Exercises 1-2.14	41
1-2.15 Two-state Devices and Statement Logic	41
Exercises 1-2.15	49
Exercises 1-2	49
1-3 Normal Forms	50
1-3.1 Disjunctive Normal Forms	50
1-3.2 Conjunctive Normal Forms	52
1-3.3 Principal Disjunctive Normal Forms	53
1-3.4 Principal Conjunctive Normal Forms	56
1-3.5 Ordering and Uniqueness of Normal Forms	58
Exercises 1-3.5	60
1-3.6 Completely Parenthesized Infix Notation and Polish Notation	61
Exercises 1-3.6	64
1-4 The Theory of Inference for the Statement Calculus	65
1-4.1 Validity Using Truth Tables	66
Exercises 1-4.1	67
1-4.2 Rules of Inference	68
1-4.3 Consistency of Premises and Indirect Method of Proof	72
1-4.4 Automatic Theorem Proving	74
Exercises 1-4	79
1-5 The Predicate Calculus	79
1-5.1 Predicates	80
1-5.2 The Statement Function, Variables, and Quantifiers	82
1-5.3 Predicate Formulas	85
1-5.4 Free and Bound Variables	86
1-5.5 The Universe of Discourse	88
Exercises 1-5	89
1-6 Inference Theory of the Predicate Calculus	90
1-6.1 Valid Formulas and Equivalences	90
1-6.2 Some Valid Formulas over Finite Universes	92
1-6.3 Special Valid Formulas Involving Quantifiers	94
1-6.4 Theory of Inference for the Predicate Calculus	96
1-6.5 Formulas Involving More Than One Quantifier	99
Exercises 1-6	101
Bibliography	102
2 Set Theory	104
Introduction	104
2-1 Basic Concepts of Set Theory	105
2-1.1 Notation	105

2-1.2	Inclusion and Equality of Sets	107
2-1.3	The Power Set	109
	Exercises 2-1.3	111
2-1.4	Some Operations on Sets	111
	Exercises 2-1.4	115
2-1.5	Venn Diagrams	116
	Exercises 2-1.5	118
2-1.6	Some Basic Set Identities	118
2-1.7	The Principle of Specification	121
2-1.8	Ordered Pairs and n -tuples	122
2-1.9	Cartesian Products	123
	Exercises 2-1	125
2-2	Representation of Discrete Structures	126
2-2.1	Data Structures	126
2-2.2	Storage Structures	129
2-2.3	Sequential Allocation	130
2-2.4	Pointers and Linked Allocation	132
2-2.5	An Application of Bit Represented Sets	141
	Exercises 2-2	147
2-3	Relations and Ordering	148
2-3.1	Relations	149
	Exercises 2-3.1	153
2-3.2	Properties of Binary Relations in a Set	154
	Exercises 2-3.2	155
2-3.3	Relation Matrix and the Graph of a Relation	156
2-3.4	Partition and Covering of a Set	162
	Exercises 2-3.4	164
2-3.5	Equivalence Relations	164
2-3.6	Compatibility Relations	171
	Exercises 2-3.6	175
2-3.7	Composition of Binary Relations	176
	Exercises 2-3.7	182
2-3.8	Partial Ordering	183
2-3.9	Partially Ordered Set: Representation and Associated Terminology	186
	Exercises 2-3.9	191
2-4	Functions	192
2-4.1	Definition and Introduction	192
	Exercises 2-4.1	197
2-4.2	Composition of Functions	198
2-4.3	Inverse Functions	201
	Exercises 2-4.3	204
2-4.4	Binary and n -ary Operations	205
	Exercises 2-4.4	210
2-4.5	Characteristic Function of a Set	210

2-4.6	Hashing Functions	212
	Exercises 2-4.6	219
	Exercises 2-4	219
2-5	Natural Numbers	220
2-5.1	Peano Axioms and Mathematical Induction	220
2-5.2	Cardinality	224
	Exercises 2-5	231
2-6	Recursion	232
2-6.1	Recursive Functions, Sets, and Predicates	232
	Exercises 2-6.1	243
2-6.2	Recursion in Programming Languages	243
	Exercises 2-6	259
2-7	Recursion in Mechanical Theorem Proving	261
	Exercises 2-7	268
	Bibliography	268
3	Algebraic Structures	270
	Introduction	270
3-1	Algebraic Systems: Examples and General Properties	271
3-1.1	Definition and Examples	271
3-1.2	Some Simple Algebraic Systems and General Properties	274
	Exercises 3-1	281
3-2	Semigroups and Monoids	282
3-2.1	Definitions and Examples	282
3-2.2	Homomorphism of Semigroups and Monoids	287
3-2.3	Subsemigroups and Submonoids	292
	Exercises 3-2	294
3-3	Grammars and Languages	294
3-3.1	Discussion of Grammars	295
3-3.2	Formal Definition of a Language	299
3-3.3	Notions of Syntax Analysis	304
	Exercises 3-3	308
3-4	Polish Expressions and Their Compilation	309
3-4.1	Polish Notation	310
3-4.2	Conversion of Infix Expressions to Polish Notation	311
	Exercises 3-4	318
3-5	Groups	319
3-5.1	Definitions and Examples	319
	Exercises 3-5.1	328
3-5.2	Subgroups and Homomorphisms	329
	Exercises 3-5.2	333
3-5.3	Cosets and Lagrange's Theorem	333
3-5.4	Normal Subgroups	335
3-5.5	Algebraic Systems with Two Binary Operations	341
	Exercises 3-5.5	343

Exercises 3-5	344
3-6 The Application of Residue Arithmetic to Computers	344
3-6.1 Introduction to Number Systems	345
3-6.2 Residue Arithmetic	348
Exercises 3-6	359
3-7 Group Codes	359
3-7.1 The Communication Model and Basic Notions of Error Correction	360
3-7.2 Generation of Codes by Using Parity Checks	364
3-7.3 Error Recovery in Group Codes	373
Exercises 3-7	376
Bibliography	376
 4 Lattices and Boolean Algebra	 378
Introduction	378
4-1 Lattices as Partially Ordered Sets	379
4-1.1 Definition and Examples	379
Exercises 4-1.1	382
4-1.2 Some Properties of Lattices	382
Exercises 4-1.2	385
4-1.3 Lattices as Algebraic Systems	385
4-1.4 Sublattices, Direct Product, and Homomorphism	387
Exercises 4-1.4	391
4-1.5 Some Special Lattices	392
Exercises 4-1.5	397
4-2 Boolean Algebra	397
4-2.1 Definition and Examples	398
4-2.2 Subalgebra, Direct Product, and Homomorphism	401
Exercises 4-2	405
4-3 Boolean Functions	406
4-3.1 Boolean Forms and Free Boolean Algebras	406
4-3.2 Values of Boolean Expressions and Boolean Functions	410
Exercises 4-3	417
4-4 Representation and Minimization of Boolean Functions	418
4-4.1 Representation of Boolean Functions	418
4-4.2 Minimization of Boolean Functions	424
Exercises 4-4	433
4-5 Design Examples Using Boolean Algebra	436
Exercises 4-5	451
4-6 Finite-state Machines	453
4-6.1 Introductory Sequential Circuits	453
4-6.2 Equivalence of Finite-state Machines	456
Exercises 4-6	465
Bibliography	466

5 Graph Theory	468
Introduction	468
5-1 Basic Concepts of Graph Theory	468
5-1.1 Basic Definitions	469
Exercises 5-1.1	469
5-1.2 Paths, Reachability, and Connectedness	475
Exercises 5-1.2	476
5-1.3 Matrix Representation of Graphs	483
Exercises 5-1.3	484
5-1.4 Trees	493
Exercises 5-1.4	494
5-2 Storage Representation and Manipulation of Graphs	501
5-2.1 Trees: Their Representation and Operations	501
5-2.2 List Structures and Graphs	501
Exercises 5-2	509
5-3 Simple Precedence Grammars	514
5-3.1 Syntax Terminology	515
5-3.2 A View of Parsing	516
5-3.3 Notion and Use of Precedence Relations	520
5-3.4 Formal Definition of Precedence Relations	523
5-3.5 Parsing Algorithm for Simple Precedence Grammars	526
Exercises 5-3	530
5-4 Fault Detection in Combinational Switching Circuits	532
5-4.1 Faults in Combinational Circuits	533
5-4.2 Notions of Fault Detection	534
5-4.3 Algorithm for Generating a Fault Matrix	535
5-4.4 Procedure for the Detection of Faults	537
Exercises 5-4	547
5-5 PERT and Related Techniques	549
Exercises 5-5	550
Bibliography	555
6 Introduction to Computability Theory	557
Introduction	557
6-1 Finite-state Acceptors and Regular Grammars	558
Exercises 6-1	566
6-2 Turing Machines and Partial Recursive Functions	566
Exercises 6-2	584
Bibliography	584
Appendix	585
Index	591
