CONTENTS

PART I UNIX SYSTEM V

1 THE UNIX OPERATING SYSTEM	1
WHAT IS AN OPERATING SYSTEM?	2
UNIX SYSTEM V FEATURES	2
Shell Functions	3
Job Control	4
Advanced Electronic Mail	4
Screen-Oriented Editor	4
Delayed Execution of Jobs	5
Scrolling Through a File	6
THE HISTORY OF THE UNIX OPERATING SYSTEM	6
THE UNIX SYSTEM ON MICROCOMPUTERS	8
WHY IS THE UNIX SYSTEM POPULAR WITH MANUFACTURERS?	8
IS THE UNIX SYSTEM BEING ACCEPTED?	10
HOW CAN IT RUN ON SO MANY MACHINES?	10
The C Programming Language	10
OVERVIEW OF THE UNIX SYSTEM	11
Utilities	11
The UNIX System Can Support Many Users	12
The UNIX System Can Support Many Tasks	12
The Shell	12
File Structure	14
Security—Private and Shared Files	14
Filename Generation	14
Device-Independent Input and Output	14
Interprocess Communication	15
WHAT ARE THE LIMITATIONS OF THE UNIX SYSTEM?	15
SUMMARY	16

5 The Shell 71

- The Command Line 72
 - Command Line Syntax 72
 - Command Name • Arguments
 - Options
 - Processing the Command Line 74
 - Executing the Command Line 76
- Standard Input and Standard Output 76
 - The Terminal as a File 76
 - The Terminal as the Standard Input and Output 77
 - Redirection 78
 - Redirecting the Standard Output • Redirecting the Standard Input • Appending the Standard Output to a File
 - Examples of Redirecting Input and Output
 - Read Ahead 85
- Pipes 85
- Filters 87
- Running a Program in the Background 88
- Filename Generation 88
 - The ? Special Character 89
 - The * Special Character 90
 - The [] Special Characters 91
 - Practicing with Filename Generation 92
- Summary 93

6 The vi Editor 95

- The Work Buffer 96
- Modes of Operation 96
- Specifying a Terminal 97
- An Editing Session 97
 - Calling vi 98
 - Entering Text 99
 - Putting vi in the Insert Mode • Entering Text
 - Correcting Text as It Is Inserted
 - Ending the Editing Session 100
 - Normal Termination • Abnormal Termination
- The vi Display 101
 - The Status Line 101
 - The @ Symbol 101
 - The ~ Symbol 102

Command Mode—Moving the Cursor	102
Moving the Cursor by Characters	103
Moving the Cursor by Words	103
Moving the Cursor by Lines	104
Moving the Cursor by Sentences and Paragraphs	105
Moving the Cursor Within the Screen	105
Viewing Different Parts of the Work Buffer	105
Insert Mode	108
The Insert Command	108
The Append Commands	108
The Open Commands	108
The Replace Commands	108
Command Mode—Deleting and Changing Text	109
The Undo Command	109
The Delete Character Command	110
The Delete Operator	110
The Change Operator	110
Searching for a String	111
The Search Commands	111
Special Characters in Search Strings	
<i>The beginning of line indicator (^) • The end of line indicator (\$)</i>	
<i>• The any character indicator (.) • The end of word indicator (\>) • The beginning of word indicator (\<) • The character class definition ([])</i>	
Substituting One String for Another	113
The Substitute Address	114
The Search and Replace Strings	114
Miscellaneous Commands	115
The Join Command	115
The Status Command	116
The . Command	116
The Delete, Yank, and Put Commands and the Use of Buffers	116
The General Purpose Buffer	116
The Delete Commands • The Yank Commands	
The Put Commands	
The Named Buffers	117
Reading and Writing Files	118
The Read Command	118
The Write Command	118
The Address • The w and ! • The Filename	

Setting Parameters	119
Setting Parameters from vi	119
Setting Parameters in a Startup File	119
Parameters	120
Line Numbers • Line Wrap Margin • Ignore Case in Searches • Allow Special Characters in Searches	
Wrap Scan • Automatic Indention • Shift Width	

Units of Measure	121
Character	122
Word	122
Blank Delimited Word	122
Line	123
Sentence	123
Paragraph	124
Screen	124
Repeat Factor	124
Summary	125
Calling vi	125
Moving the Cursor by Units of Measure	125
Viewing Different Parts of the Work Buffer	126
Adding Text	126
Deleting and Changing Text	126
Searching for a String	127
String Substitution	127
Special Commands	128

7 The nroff Text Formatter 129

Using nroff with the -ms Package	131
Theory of Filling and Justifying Lines	132
<i>Input file • Filled output text • Filled and justified output text</i>	
Filling a Line	132
Justifying Text	133
The Input File	133
Command Lines	133
Commands	
<i>Command arguments</i>	
Text Lines	134
Paragraphs	135
The Standard Paragraph	135
The Left Block Paragraph	136
Indented Paragraphs	137
The Block Quote Paragraph	138

Breaks	139
The End Line Command	139
The Implicit End Line Command	140
The Space Command	141
The Center Text Command	142
The Begin Page Command	143
Setting the Left Margin	143
Adjusting the Right Margin	146
Section Headings	147
Emphasis	150
Page Layout	151
The Date	151
Headers and Footers	151
Page Numbers	152
Keeps, Footnotes, and Displays	155
Keeps	155
Ending a Keep • Standard Keeps • Floating Keeps	
Footnotes	157
Displays	161
Standard Display • Flush Left Display • Centered Display	
Changing Dimensions	163
Vertical Spacing: Text and Paragraphs	164
<i>Effect • Unit of measure • When the change takes effect</i>	
<i>Names of the registers • Examples</i>	
Line Length: Text and Footnotes	165
<i>Effect • Unit of measure • When the change takes effect</i>	
<i>Names of the registers • Examples</i>	
Paragraph Indentation	165
<i>Effect • Unit of measure • When the change takes effect</i>	
<i>Names of the registers • Examples</i>	
Top and Bottom Margins	166
<i>Effect • Unit of measure • When the change takes effect</i>	
<i>Names of the registers • Examples</i>	
Summary	167
Calling nroff	167
Plain nroff Commands	168
Breaks • Margins • Headings • Changing Dimensions • Hyphenation	
-ms Macro Commands	169
Paragraphs • Margins • Headings • Keeps, Footnotes, and Displays • Changing Dimensions • Underlining	
-me Macro Commands	171
Paragraphs • Headings • Block Quotes, Footnotes, and Displays	

8 The Bourne Shell as a Programming Language 173

- Executable Files 174
 - Shell Scripts 174
 - Execute Access 174
- Variables 175
 - User Variables 176
 - Variable Substitution 176
 - Read-only User Variables 177
 - Read-only Shell Variables 177
 - Name of the Calling Program • Arguments
 - Shift
 - Shell Variables 180
 - HOME • PATH • PS1 • PS2 • IFS
 - Reading User Input 183
- Processes 184
 - Process Structure 184
 - Executing a Command 184
 - Process Identification 184
 - Exit Status 186
 - Invocation 187
 - sh • The . and Exec Commands • Command Substitution
 - Environment and Exporting Variables 190
 - Export
- Command Separation and Grouping 192
 - The `(NEWLINE)` Character 192
 - The | and & Characters 192
 - Command Grouping 194
- Control Structures 195
 - If Then 195
 - If Then Else 197
 - If Then Elif 199
 - For In 201
 - For 203
 - While 204
 - Until 205
 - Case 207
 - The Here Document 209
- Signals 211
- Summary 212

9 The C Shell 215

Entering and Leaving the C Shell 216

History 217

Reexecuting Events 217

Reexecuting the Previous Event • Using Event Numbers • Using Event Text

Words within Events 219

Modifying Previous Events 220

Alias 222

Implementation of Alias 223

Argument Substitution 224

Variables 225

Variable Substitution 225

String Variables 225

Arrays of String Variables 227

Numeric Variables 227

Expressions • Arrays of Numeric Variables

Braces 231

Special Forms of User Variables 232

Shell Variables 232

Shell Variables That Take on Values

\$argv • \$argv • \$cdpath • \$child • \$history
\$home • \$path • \$prompt • \$shell • \$status
\$\$

Shell Variables That Act as Switches

\$echo • \$ignoreeof • \$noclobber • \$noglob
\$nonomatch • \$verbose

Filename Generation 235

C Shell Scripts 236

Executing a C Shell Script 236

Automatically Executed Shell Scripts 236

.login • .cshrc • .logout

Control Structures 237

If • Goto • Interrupt Handling

If Then Else

Form 1 • Form 2 • Form 3

Foreach • Break and Continue • While • Switch

Reading User Input 244

Built-in Commands 245

@ • Alias • Cd (or Chdir) • Echo • Exec • Exit
Foreach • Goto • History • If • Login • Logout
Onintr • Repeat • Set • Setenv • Shift • Source
Switch • Time • Unalias • Unset • Wait • While

Summary 247

PART II THE UNIX UTILITY PROGRAMS

249

- at**—execute a Shell script at a specified time 253
- awk**—search for and process a pattern in a file 255
- cal**—display calendar 261
- calendar**—reminder calendar 262
- cat**—display a text file 263
- cc**—C compiler 265
- cd** or **chdir**—change to another working directory 267
- chmod**—change the access mode of a file 268
- comm**—compare files 271
- cp**—copy file 273
- diff**—display the differences between two files 275
- echo**—display a message 283
- expr**—evaluate an expression 284
- file**—display file classification 290
- find**—find files 291
- grep**—search for a pattern in a file 297
- kill**—terminate a process 301
- ln**—make a link to a file 303
- lpr**—print file 305
- ls**—display information about a file 307
- mail**—send or receive mail 314
- make**—keep a set of programs current 317
- mesg**—enable/disable reception of messages 324
- mkdir**—make a directory 325
- more**—display a file, one screenful at a time 326
- mv**—move (rename) a file 327
- od**—dump the contents of a file 329
- pr**—paginate file for printing 331

ps—display process status 333
rm—delete a file (remove a link) 336
rmdir—delete a directory 338
sed—editor (noninteractive) 339
sleep—put the current process to sleep 351
sort—sort and/or merge files 352
spell—check a file for spelling errors 360
stty—display or establish terminal parameters 361
tail—display the last part (tail) of a file 365
tee—copy the standard input to the standard output 367
test—evaluate an expression 368
touch—update a file's modification time 372
tty—display the terminal pathname 373
uniq—display lines of a file that are unique 374
wc—display the number of lines, words, and characters 377
who—display names of users 378
write—send a message to another user 379

APPENDICES	381
A Regular Expressions	383
Characters	384
Delimiters	384
Simple Strings	384
Special Characters	385
Period	385
Square Brackets	385
Asterisk	386
Caret and Dollar Sign	387
Quoting Special Characters	387
Rules	388
Longest Match Possible	388
One Regular Expression Does Not Exclude Another	388
Empty Regular Expressions	388
Bracketing Expressions	389
The Replacement String	389
Ampersands	389
Quoted Digits	390
Summary	391
B A Read Routine for the C Shell	393
C Glossary	395
D The XENIX Operating System	403
