Computer Science Series

## Preface

xiii

## Chapter 1 Introduction

1-1	Networks—A Perspective	1
1-2	Objectives of Networks	3
1-3	Network Components	11
	User Subnetwork	13
	Communication Subnetwork	13
1-4	Message Transport Technologies:	14
	Circuit-Switched, Message-Switched, and	
	Packet-Switched Networks	16
	Comparison of Network Classes	17
	Problems	19
	References	19

## Chapter 2 Transmission Links and Procedures

2-1	Transmission Links	21
	Terrestrial Links	23
	Switched and Leased Connections	23
	Dataphone Digital Service	23
	Satellite Links	25
	Propagation Delay	26
	The Collision Problem on Satellite Channels	28
	Pure ALOHA	29
	Slotted ALOHA	30
	Frequency-Division Multiple Access	31
		32

	Time-Division Multiple Access	3
	Other Multiple-Access Protocols	3
	Radio-Latin	3
	Carrier-Sense Multiple-Access Method	3
	Optical Fiber	3
2.2	Transmission Modes	4
	Simultaneous Transmission: Half Duplex and Full Duplex	4
	Point-to-Point and Multipoint Link Control: Polling	4
	Polling and Hub Polling	4
	Full Time Analysis	4
2.3	Transmission Protocols	4
	Asynchronous Serial Transmission	5
	Synchronous Serial Transmission	5
	Binary Synchronous Communications	5
	Synchronous Data Link Control	5
	CCITT Recommendation X.21	6
	X.21 for	6
	Summary	6
	Problems	6
	References	6

## Chapter 3 Design and Analysis of Network Nodes

3.1	Node Design	69
	Source/Destination Functions	71
	End-to-End Protocols	72
	Network Interface	73
	Segmenting and Reassembly	73
	Sequence Numbers	74
	Creation and Deletion of Headers	75
	Store-and-Forward Functions	79
	Routing	79
	Local Flow Control and Lockups	80
	Error Control	82
	Network-Wide Functions	83
	Network Flow Control	83
	Topological Awareness and Modification	83
	Network Performance Measurement and Monitoring	84
3.2	Node Architecture and Analysis	85
	Software	86
	Interface Hardware	87

	<i>Message Retransmission Caused by Overflow on Intermediate Buffers</i>	88
3-3	Node Processor	94
	Processor Capacity Estimation	96
3-4	Node Memory	100
	Memory Size Estimation	103
3-5	IBM 3705 Communications Controller	108
	Summary	110
	Problems	112
	References	112

## Chapter 4 Topological Design 115

4-1	Selecting Terminal-Concentrator Locations	119
4-2	Multipoint Connections between a Terminal Concentrator and Neighboring Terminals	123
	Minimum Spanning Tree	124
	Chandy-Russell Algorithm	126
	Heuristic Algorithms	130
	Esau-Williams Algorithm	131
	Kruskal Algorithm	133
	Generalized Heuristic Algorithm	134
4-3	Link and Link Capacity Assignment between Network Nodes	135
	Cut Saturation Algorithm	135
	Capacity Assignment	138
	Discrete Link Capacity Assignment	141
4-4	Disjoint Route Topology	144
	Summary	145
	Problems	146
	References	148

## Chapter 5 Network Protocols 151

5-1	Concepts in Protocol Design	153
	Functions of Protocols	158
5-2	Network Architectures and Protocols	159
	Protocols for ARPANET	160
	Reference Model for Open Systems	162
	Interconnection	165
	X.25	168
	X.25 Procedures	171
	Systems Network Architecture	174
	Digital Network Architecture	176
5-3	Protocol Description Techniques	

	State Diagrams	178
	Petri Nets	180
	Backus Normal Form	180
	Format and Protocol Language	182
	RSPL	182
5-4	Protocol Validation Techniques	183
	Duologue Matrix Approach	184
	State Perturbation Approach	186
	Summary	188
	Problems	189
	References	189
<b>Chapter 6</b>	<b>Flow Control</b>	<b>193</b>
6-1	Network Congestion	195
	Flow Control	196
6-2	Flow Control Techniques	197
	Centralized Flow Control	197
	<i>Flow Control in TYMNET</i>	200
	<i>Flow Deviation Method</i>	201
	Distributed Flow Control	203
	<i>End-to-End Flow Control</i>	204
	<i>Window Size Selection</i>	205
	<i>Flow Control in SNA</i>	208
	Isarithmic Flow Control	211
	Comparison of Flow Control Techniques	212
6-3	Deadlocks	213
	Protocol Deadlocks	213
	<i>Reassembly Lockup</i>	215
	Buffer Deadlocks	215
	<i>State Enumeration Approach</i>	217
	<i>Approach Using Network Flows</i>	222
	<i>Labeling Algorithm</i>	225
	<i>Deadlock-Free Buffer Allocation</i>	227
	Summary	229
	Problems	230
	References	231
<b>Chapter 7</b>	<b>Routing</b>	<b>233</b>
7-1	Introduction	235
7-2	Deterministic Routing	238
	Shortest Path Algorithms	238
	Floyd's Algorithm	239
	Minimum Delay Algorithm	

7-3	Reliability in Deterministic Routing	242
	Disjoint Deterministic Routes	242
7-4	Adaptive Routing Strategies	246
	Centralized Adaptive Routing	246
	Random Routing	250
	Adaptive Routing in ARPANET	251
	Other Adaptive Routing Schemes	254
	Hierarchical Adaptive Routing	254
	Summary	255
	Problems	257
	References	258
<b>Chapter 8</b>	<b>Performance Analysis</b>	261
8-1	Probability Concepts	263
	Probability Distributions	267
8-2	Network Performance Estimates	271
	Summary	278
	Problems	278
	References	279
<b>Appendix A</b>	<b>Networks and Network Services</b>	281
A-1	TYMNET	283
	Routing	284
	Centralized Control	285
	Flow Control	286
A-2	DATAPAC	286
	Functional Layers	289
A-3	TELENET	291
A-4	Nordic Public Data Network	291
A-5	TRANSPAC	292
	References	295
	<b>Index</b>	298
