BUSINESS DATA COMMUNICATIONS

843001
IP-5-02
Macmillan Publishing Company
NEW YORK

CONTENTS

Chapter 1	Introduction	1
	1-1 Information and Communications	1
	1-2 The Nature of Business Information	2
	1-3 The Manager's Dilemma	4
	1-4 Transmission of Information	5
	1-5 Networks	8
	1-6 Communications Software	9
	1-7 Security and Network Management	10
	1-8 A Career in Communications Management	11
	1-9 How to Keep Us	13
	1-10 Outline of the Book	16

PART ONE

REQUIREMENTS

23

Chapter 2	Business Information	25
	2-1 Voice	26
	2-2 Data	35
	2-3 Image	51
	2-4 Video	61
	2-5 Integrated Office Automation Systems	68
	2-6 Summary	72
	Recommended Reading	74
	CASE STUDY: The National Security Council	76
	CASE STUDY: Hercules, Inc.	77

Chapter 3	Distributed Data Processing	
	3-1 Centralized Versus Distributed Data Processing	80
	3-2 Forms of Distributed Data Processing	92
	3-3 Communications Implications of DDP	103

3-5 Summary	117
Recommended Reading	119
CASE STUDY: Champion International Corporation	120

PART I CASE STUDY: General Motors' Factory of the Future	122
--	-----

PART TWO

FUNDAMENTALS

123

Chapter 4

Transmission and Transmission Media

4-1 Signals for Conveying Information	134
4-2 Transmission Impairments and Channel Capacity	147
4-3 Transmission Media	153
4-4 Summary	174
Recommended Reading	176
CASE STUDY: Boeing Computer Services Inc.	177
CASE STUDY: The Alaskan Satellite Network	178

133

Chapter 5

Communication Techniques

5-1 Signal Encoding	181
5-2 Asynchronous and Synchronous Transmission	195
5-3 Interfacing	201
5-4 Line Configurations	212
5-5 Flow Control	214
5-6 Error Detection	220
5-7 Error Correction	224
5-8 Link Control	226
5-9 Summary	236
Recommended Reading	239

18

Chapter 6

Transmission Efficiency

6-1 The Need for Transmission Efficiency	242
6-2 Frequency-Division Multiplexing	250
6-3 Synchronous Time-Division Multiplexing	254
6-4 Statistical Time-Division Multiplexing	264
6-5 Data Compression	272
6-6 Summary	284
Recommended Reading	286

PART THREE NETWORKING

Chapter 7

Wide-Area Networks

- 7-1 Circuit-Switching Technology 302
- 7-2 Circuit-Switching Networks 313
- 7-3 Packet-Switching Networks 327
- 7-4 X.25 341
- 7-5 Wide-Area Network Alternatives 345
- 7-6 Summary 356
- Recommended Reading 358
- CASE STUDY: Nichols Institute 359

Chapter 8

Local Networks

- 8-1 Background 363
- 8-2 LAN Requirements 373
- 8-3 LAN Technology 377
- 8-4 LAN Interfacing 393
- 8-5 LANs: Standards 395
- 8-6 Digital Data-Switching Devices 403
- 8-7 The Digital Private Branch Exchange 405
- 8-8 Digital PBX Versus LAN 415
- 8-9 Summary 416
- Recommended Reading 418
- CASE STUDY: American Sterilizer Co. 419

Chapter 9

Integrated Services Digital Networks

- 9-1 The Arrival of ISDN 421
- 9-2 The Integrated Digital Network 425
- 9-3 ISDN Concept 429
- 9-4 ISDN Architecture 440
- 9-5 ISDN Standards 448
- 9-6 Broadband ISDN 455
- 9-7 Status and Prospects 461
- 9-8 Summary 465
- Recommended Reading 467

Chapter 10

Open-Systems Interconnection

479

- 10-1 A Simple Communications Architecture 480
- 10-2 The OSI Architecture 486
- 10-3 IBM's System Network Architecture 503
- 10-4 Internetworking 513
- 10-5 Enhanced Performance Architecture 523
- 10-6 Summary 525
- Recommended Reading 527

529

Chapter 11

Distributed Applications

- 11-1 Electronic Data Interchange 530
- 11-2 Electronic Mail 543
- 11-3 File Transfer 559
- 11-4 Document Architecture and Interchange 571
- 11-5 Summary 584
- Recommended Reading 587
- CASE STUDY: Schlumberger Ltd. 588
- CASE STUDY: Gillette 589

590

Chapter 12

Terminals

- 12-1 Terminal Characteristics 591
- 12-2 Front-End Processors 605
- 12-3 PAD Devices 606
- 12-4 The IBM 3270 Terminal Product Line 614
- 12-5 Virtual Terminal Service 623
- 12-6 Summary 629
- Recommended Reading 632

Chapter 13

Security

635

- 13-1 Security Threats 637
- 13-2 Encryption 642
- 13-3 Message Authentication 654
- 13-4 Digital Signatures 656
- 13-5 Access Control 660

13-6	Trusted Systems	665
13-7	Security Services and Mechanisms	669
13-8	Summary	677
	Recommended Reading	680
	CASE STUDY: Schlumberger Ltd.	681

Chapter 14

Network Management

683

14-1	Network Management Requirements	685
14-2	Network Indicators	689
14-3	Technical Control	700
14-4	Performance Monitoring	706
14-5	Network Management Systems	712
14-6	Local Network Management	726
14-7	Summary	731
	Recommended Reading	734

APPENDICES

Appendix A

Buyers' Guidelines

735

A-1	Communications Carrier Services	735
A-2	Data Concentration Equipment	736
A-3	Data Transmission Equipment	737
A-4	Time-sharing Services	738
A-5	Diagnostic and Test Equipment	739
A-6	Distributed Data Processing and Messaging Systems	740
A-7	Local Area Networks	741
A-8	Printers and Terminals	742
A-9	Protocol Conversion Devices	743
A-10	Communications Software	744
A-11	Storage Devices and Media	745
A-12	Switching Equipment	746
A-13	Support Equipment	747
A-14	Support Services	748

Appendix B

Standards and Standards-making Organizations

750

B-1	The Importance of Standards	750
	Regulation	750

Telecommunications and Regulation

757

- C-1 U.S. Telecommunications Carriers 757
- C-2 Regulatory Agencies 765
- C-3 A Brief History of Telecommunications Regulation in the United States 766

Chapter 1

Introduction

1-1 Information and Communications¹

Perhaps in the 1960s, when Marshall McLuhan coined the term *global village*, he foresaw that in the 1980s General Motors would operate a network that links over 500,000 computing devices and telephones and connects 18,000 locations worldwide. Or that American Airlines' SABRE reservations network, linking more than 60,000 video terminals all over the planet to six massive mainframe computers, sometime posts larger annual revenues than the airline itself.

By any name, a confluence of computers, communication technologies, and demographics is transforming the way any enterprise conducts itself and carries out its organizational mandate. And it's happening fast. Any business that ignores it will fall hopelessly to the rear in the global race for the competitive edge.

At the heart of the transformation is information. No longer a byproduct — no longer, in many cases, even a cost center — the generation and movement of information has been made profitable by those who have taken up the technological challenge posed by the myriad machines that have automated so much of our lives.

We are, unquestionably, dependent on computers and the communications devices and services that connect them. The number of computers and terminals at work in the world today stands in the neighborhood of 10 million. It constitutes a critical mass: The overwhelming need of organizations and their workers now is for connectivity, for integration, for ease of information access.

"We call it group computing," explains Daniel Crane, vice president of marketing for Toshiba America's personal computing division. "It improves the productivity and efficiency of the group and the corporation. People need to share data and information and the company that provides this capability will beat the competitor who does not."

"In order to be successful in the 1990s," says Fred Wang, president of Wang Laboratories, Inc., "enterprises must be able to access all useful
